CYP2D6 Genotype Results

- **Normal Metabolizer (NM)**
  - Normal analgesia expected with opioids*

- **Ultra-Rapid Metabolizer (UM)**
  - Increased risk of toxicity expected with opioids*

- **Intermediate Metabolizer (IM)**
  - Decreased analgesia expected with opioids*

- **Poor Metabolizer (PM)**
  - Very decreased analgesia expected with opioids*

---

**Change opioid therapy to morphine, hydromorphone, fentanyl, or other analgesics without dependence on the CYP2D6 pathway**

*oxycodone, tramadol, hydrocodone, and codeine

---

Continue usual care
