

What we have learned about integrating PROs with EMRs for learning systems?

Amy Abernethy, MD PhD

Director, Center for Learning Health Care, Duke Clinical Research Institute

Director, Duke Cancer Care Research Program, Duke Cancer Institute

Duke University Medical Center, Durham, North Carolina, USA

August 2013

Abernethy Funding & Disclosures

- ❖ AHRQ (CMS), NCI, NIH/NINR, RWJ
- ❖ Clinical research: Biovex, DARA, Helsinn, MiCo and Pfizer
- ❖ Clinical research now complete: Alexion, Amgen, Eli Lilly, and Kanglaite
- ❖ Pending: BMS, Genentech
- ❖ Consultant <\$5K annual in past 3 years – Helsinn (2010), Novartis (2011), Pfizer (2012)
- ❖ Corporate Board of Directors – Advoset (education company, including contracts from Novartis), **Orange Leaf Associates LLC (IT development company)**
- ❖ Pending consultancy – BMS (amount unknown, Co-Chair of Scientific Advisory Committee)
- ❖ Paid leadership roles – American Academy of Hospice & Palliative Medicine (starting March 2013, President)

Getting on the same page... PROs

- ❖ Symptoms
- ❖ Health-related quality of life
- ❖ Health state (e.g., towards utilities/QALYs)
- ❖ Medication use/compliance
- ❖ Satisfaction
- ❖ “Value” of treatment

What is a Learning Health System?

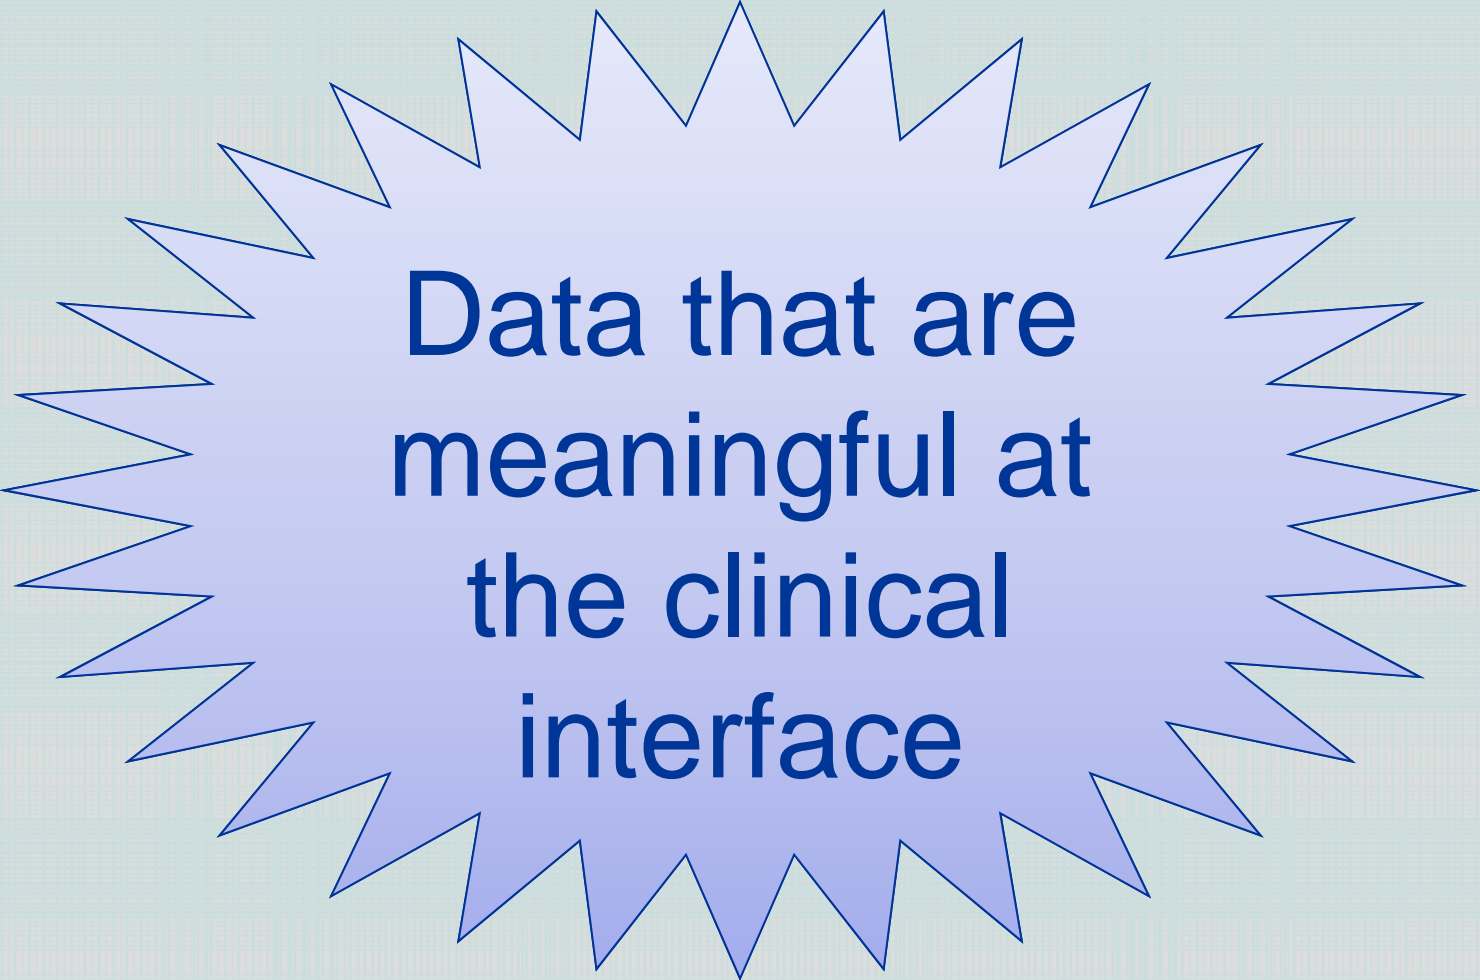

A “learning health care system” (LHCS) leverages recent developments in health information technology and a growing health data infrastructure to access and apply evidence in real time, while simultaneously drawing knowledge from real-world care-delivery processes to promote innovation and health system change on the basis of rigorous research. Ann Intern Med. 2012;157(3):207-210.

What is a Learning Health System?

- ❖ Organization that learns (quality & PI view)
- ❖ Systematically linked process for evidence generation and implementation (Research / clinical trials)
- ❖ National system of linked data to generate novel insights and monitoring
- ❖ Continuously aggregating datasets to support point of care clinical decision making, personalized medicine, and research
- ❖ Closer approximation of research and practice so that each informs the other
- ❖ Learning laboratories of healthcare to optimize and prioritize innovations and solutions

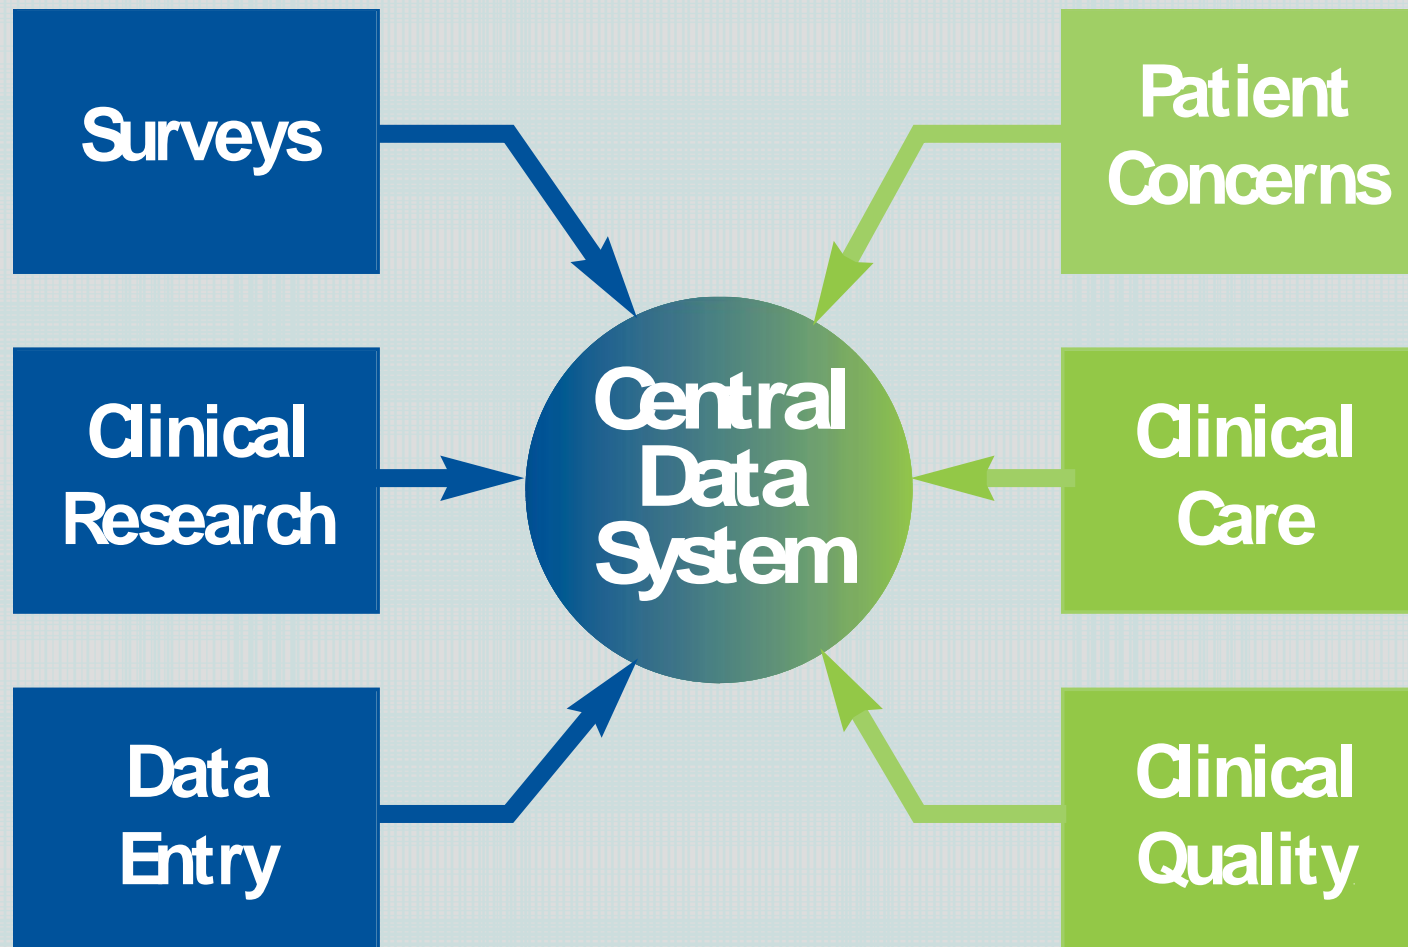

**Data
generation,
use and
reuse**

**Data that are
meaningful at
the clinical
interface**

PRO-BASED LEARNING HEALTH CARE

The original story...

Rapid Learning Cancer Clinic

Start off with electronic patient-reported outcomes (ePRO) data, and then build in additional linked datasets over time.

Endeavor to obtain “research-quality” clinical data

- ❖ Equal quality of a clinical trial
- ❖ Reliable data can be parsed out for clinical trials, clinical care, quality monitoring, and CER simultaneously

(Abernethy et al, *Health Services Research*, 2008)

What a great opportunity – why weren't they already doing it?

❖ PRO data are historically difficult to collect

- Missing data are frequent
- Confidence in the patient report
- Reliability, validity, accuracy, data quality
- Standards are needed

❖ Who is driving the process?

- Practical implementation of standardization PRO data collection in research and clinical care can be difficult
- Research or clinical care?
- Which researcher or which clinician?
- Alignment of incentives

Education matched to clinical needs and patient interest

Returning Patient

Hello and welcome back to Duke Cancer Institute. The DCI is one of only 40 centers in the country designated by the National Cancer Institute as a "comprehensive cancer center," combining cutting-edge research with compassionate care. After watching this iLog you'll know more about the vast array of educational materials that are available to you here. You'll also get to meet some of the caring individuals that are here to help you. Thank you for trusting us with your care, we will be here for you every step of the way.

Missing Data: Encounter-level

Research demonstrates...

- ❖ Easy to use, navigate, and read (usability & feasibility)
 - Patients satisfied with e/Tablets, and would recommend them to other patients.
 - Help patients recall symptoms to report.
- ❖ ePRO system can be used to collect research-quality data using common, validated instruments (reliability & validity)
 - Reliability, validity, and equivalence testing
 - Appropriate for clinical trials

Now that we have the data, there are a lot of ways we can use it...

Sequentially linked data

New datasets can be sequentially added, starting at the patient level, using warehousing or federated models. The key element is patient-level linkage.

Describing the patient experience

Individual patient

Clinical operations

Research reports

Table 1 Incidence of gastrointestinal symptoms, according to severity, in breast, gastrointestinal, and lung cancer patients

	Breast	GI (%)	Lung (%)	Total (%)
Total N	65 (100)	113 (100)	97 (100)	275 (100)
Nausea (queasy feeling)				
0: none	21 (32)	43 (38)	102 (100)	166 (60)
1-3: mild	21 (32)	31 (27)	80 (82)	132 (48)
4-6: moderate	12 (18)	23 (20)	52 (54)	87 (32)
7-10: severe	11 (17)	16 (14)	31 (32)	58 (21)
Vomiting				
0: none	51 (78)	73 (65)	106 (100)	230 (84)
1-3: mild	8 (12)	24 (21)	50 (52)	82 (30)
4-6: moderate	4 (6)	9 (8)	10 (10)	23 (8)

EHR Attached PPACT Provider Feedback Form

PHYSICIAN FEEDBACK FORM

Patient Name Scott Simpson
 Health Record Number 8448-22-46
 Pre-Program ☒ Mid-Program ☐ Post-Program ☐

SUGGESTED PCP ACTIONS

- Referral to Sleep Clinic (Epworth Score: 12)
- Physician release authorizing attendance of water exercise class at the community center.
- Review amitriptyline dose – patient experiencing significant morning drowsiness
- Discuss opioid side effects (constipation, drowsy)

PATIENT PROGRAM GOALS

Quality of Life Goal: Play with my grandchildren when they come over to visit.

- A. Your patient's current ability to do this activity B. Your patient's ability to do this activity if things were a bit worse, a big better, even better, much better.

NOW				
A bit worse		A bit better	Even better	Much better
Resting in bedroom when kids come over	Sit in adjustable kitchen chair while kids play in living room.	Sit in living room recliner while kids play in same room	Use pillows & props to sit against couch while kids play	Sit on the floor and play with kids

Items from BPI and Oswestry Disability Index

Oswestry Total score

The Goals

- ❖ Patient portals, home interfaces, interfaces in the clinics
- ❖ Apps, web-based solutions, etc with APIs to transfer data
- ❖ Information to support care in real-time
- ❖ PROs that drive a number of solutions
 - Education, quality monitoring, triage
- ❖ Alignment with process
 - One size doesn't fit all
- ❖ Risk management

What do we need?

❖ Tools that make sense

- How is my patient doing?
- Data that are valuable for multiple purposes
- Just because I can change the questions around, should I?

❖ Patient participation in serial assessment

❖ Integration into clinical process

- Alignment of incentives
- Engage providers
- Improve clinical productivity

❖ Data governance

- Data interoperability

DukeMedicine

Duke Cancer Care
Research Program

LESSONS LEARNED

ePRO environment for Learning Health Care: Lessons learned

- ❖ Four interchangeable components
- ❖ Importance of user interface and reporting
- ❖ Must meet patient and clinical needs first
 - Research with service
- ❖ Efficient and high quality approach for data collection
 - Missingness is a critical signal
 - Data visualization

**Data
generation,
use and
reuse**
