ED Supportive Care Build (Refer to the PDF for the text within the BPA's)

+MOLST Informational BPA for RN and column notification for ESA

Criteria = +MOLST Document over time (lookback 1 year) and Either an ESI of 1 or 2 or +Code Start in Current Encounter

Build – For the ESA Column
Notification: In the column (located in a Track Board View) build we used a programming point that looks to a rule and the rule searches the chart for a scanned MOLST document in the chart with a lookback time of 1 year

Build for RN: In the Best Practice Alert we added criteria through a rule to look for a +MOLST document scanned in the chart within the last year as well as look at the current encounter for the triage documentation of the acuity (1 or 2) or a code start documented; when both the document is found along with 1 of the other three current components then the Advisory would fire for the RN. This is set up to fire just the once after acknowledged by the RN

+MOLST BPA for Providers with Goals of Care Discussion Trigger

Criteria = +MOLST Document over time (lookback 1 year) and Either an ESI of 1 or 2 or 3 in Current Encounter

Build for Providers: In the Best Practice Alert we added criteria through a rule to look for a +MOLST document scanned in the chart within the last year as well as look at the current encounter for the triage documentation of the acuity (1 or 2 or 3) when both the document is found along with an acuity of 1, 2 or 3 then the BPA fires. We set the BPA to require an action (ordering of Social Work consult or Palliative Care or both – you can default the action here) or require a comment if no action. We also set this up to fire for all Providers so that the Attendings would see even though the Resident may have already seen and taken action.

NO MOLST BPA for Providers Goals of Care Discussion Trigger

This BPA was the most comprehensive and has multiple criteria to consider as well as inclusions and exclusions

Criteria = Or Logic
(Over time 1 year)
Medical Surprise Question = No
Previous Palliative Consult Order or Outpatient visit
Previous DNR Order
Previous Hosp Dispo to Skilled Nursing Facility or Long Term Care Facility
Previous scan document consent to withhold life-sustaining treatment
ECOG Score 3 or 4
(Current Encounter)
Code Narrator Start
Active order for mechanical vent or non-invasive ventilation
Lab Values of either a GFR<15 or Albumin <2 or BiCarb<10 or pCO2>70

This BPA also looks at the triage acuity documented and won't fire unless it's 1, 2 or 3 and also looks at some other exclusions - so even if criteria met it will not fire if there is + BPA for + MOLST or +BPA for Hospice Dispo or if there is a current Order for Palliative Care Consult or Geriatric Consult

Build for Providers: In the Best Practice Alert we added criteria through multiple rules built within rules to look for any +criteria in the chart within the last year as well as look at the current encounter for the triage documentation of the acuity (1 or 2 or 3) or for current + criteria met listed previously – it also looks at inclusions and exclusions at the same time so when one of the various criteria are found and inclusions and exclusions are all met then the BPA fires. We set the BPA to require an action (ordering of Social Work consult or Palliative Care or both – you can default the action here) or require a comment if no action. We also set this up to fire for all Providers so that the Attendings would see even though the Resident may have already seen and taken action.

+ HOSPICE Provider BPA

Criteria = Previous Dispo of Home Hospice or Inpatient Hospice or looks at previous documentation from a Care Manager or Social Worker for Hospice Referral in a flowsheet row
The lookback time is 6 months

Build for Providers: In the Best Practice Alert we added criteria through a rule to look for a previous disoposition of Home Hospice or Inpatient Hospice within the last 6 months or a previous flowsheet row documented with Hospice referral within the last 6 months when any of these criteria met then the BPA fires. We set the BPA to require an action (ordering of Social Work consult or Palliative Care or both – you can default the action here) or require a comment if no action. We also set this up to fire for all Providers so that the Attendings would see even though the Resident may have already seen and taken action.

+ Hospice Social Work and Care Manager Informational BPA and Hospice Column Notification for Care Managers and Social Work

Criteria = Previous Dispo of Home Hospice or Inpatient Hospice or looks at previous documentation from a Care Manager or Social Worker for Hospice Referral in a flowsheet row
The lookback time is 6 months

The column on their Track Board View was built by having a programming point look to a rule that looked at a previous dispo of Home Hospice or Inpatient Hospice or flowsheet row documentation of Hospice Referral ; this looks back 6 months and displays a flower icon when met

Build for Care Managers and Social Workers
This is an Advisory that is set up to fire just the once and to be acknowledged by the CM or SW when the patient has had a previous dispo of Home Hospice or Inpatient Hospice or previous documentation on a flowsheet row for Hospice Referral; this is built in the advisory record using rules that look over the last 6 months for the documentation in the chart
