

Download FoodSwitch for iOS or Android

The image shows the app store page for FoodSwitch USA and four screenshots of the app's interface. The app store page features a blue icon with a shopping basket and two arrows, the title 'FoodSwitch USA', the category 'FoodSwitch Health & Fitness', a 3-star rating, and an 'Everyone' age rating. Below the app name is a note: 'This app is compatible with your device.' There are buttons for 'Add to Wishlist' and 'Install'.

The four screenshots illustrate the app's workflow: 1) A hand holding a jar of food. 2) The 'Scan' screen with a barcode being scanned. 3) The 'SELECTED PRODUCT' screen for 'Brand A Packaged Food Product', showing nutritional data: Energy 146kJ/35kcal (2% of daily intake), Fat 0.0g (0%), Sat Fat 0.0g (0%), Sugars 7.5g (0%), and Salt 0.0g (0%). 4) The 'HEALTHIER CHOICES' screen comparing Brand A with Brands B, C, and D based on various metrics.

Brand	Energy	Fat	Sat Fat	Sugars	Salt
Brand A	146kJ/35kcal (2%)	0.0g (0%)	0.0g (0%)	7.5g (0%)	0.0g (0%)
Brand B	42/10	LOW	LOW	MED	LOW
Brand C	100/24	LOW	LOW	HI	LOW
Brand D	109/26	LOW	LOW	HI	LOW

FoodSwitch: A mobile platform for packaged food surveillance and behavioral research

Take Home Points

Surveillance of the global packaged food supply is necessary to improve its healthfulness: trans fats and salt are exemplars.

FoodSwitch is a mobile phone app that uses crowdsourcing for packaged food surveillance on a brand-level and is available in the US.

Crowdsourcing is an increasingly prevalent approach for mutual reinforcing activities of generating ideas, data collection, and community engagement.

Mobile- and online-based trials provide opportunities for lower cost, scalable interventions yet require new partnerships for sustainability.

The image shows the app store page for FoodSwitch USA and four screenshots of the app's interface. The app store page features a blue icon with a shopping basket and two arrows, the title 'FoodSwitch USA', the category 'FoodSwitch Health & Fitness', a 3-star rating, and an 'Everyone' age rating. Below the app name is a note: 'This app is compatible with your device.' There are buttons for 'Add to Wishlist' and 'Install'.

The four screenshots illustrate the app's workflow: 1) A hand holding a jar of food. 2) A barcode scanner interface with a 'Scan' button and a 'LISTS' tab. 3) A detailed nutrition label for 'Brand A Packaged Food Product' showing values for Energy (146kJ/35kcal), Fat (0.0g), Sat Fat (0.0g), Sugars (7.5g), and Salt (0.0g), along with a 'HEALTHIER CHOICES' section. 4) A list of other brands (Brand B, C, D) with their respective nutrient profiles.

Brand	Energy	Fat	Sat Fat	Sugars	Salt
Brand B	42/10	LOW	LOW	MED	LOW
Brand C	100/24	LOW	LOW	HI	LOW
Brand D	109/26	LOW	LOW	HI	LOW

Background

The US food supply has excessive salt, added sugar, and unhealthy fats that drive chronic diseases and their upstream risk factors.

While dietary guidelines generally recommend diets rich in fresh fruits and vegetables, Americans receive most of their calories through packaged foods.

Most dietary surveillance methods have relied upon self-reporting of dietary intake, which is prone to recall bias.

To understand and improve the healthfulness of the food supply, it is imperative to monitor the food supply at a granular level, yet no such surveillance system has existed until recently.

Example 1: Same brand, same country

**Product
higher in salt**

Sodium per serving: 155mg

65% less salt!

**Product
lower in salt**

Sodium per serving: 55mg

Example 2: Same product, different countries

**Product higher
in salt**

USA: Sodium per 100g: 720mg

**Product lower
in salt**

Australia: Sodium per 100g: 550mg

31% less salt!

Example 3: Different brands, same country

**Brand higher
in salt**

Sodium per 100g: 600mg

35% less salt!

**Brand lower
in salt**

Sodium per 100g: 400mg

Saving strokes: Comparison of salt in example adult meals in one day

Amount of salt in initial choice	Amount using lower salt options	Salt saved
----------------------------------	---------------------------------	------------

Breakfast

Kellogg's Special K Forest Berries 45g	0.50	Kellogg's Just Right Barley & Berry Flavour 45g	0.05	94% less salty
Total breakfast	0.50 g	Total breakfast	0.05 g	Save 0.45 g

Snack

Arnott's Sao Biscuit 25g	0.50 g	Ryvita Multigrain Wholegrain Rye Crispbread 25g	0.20	67% less salty
Kraft Crunchy Peanut Butter 20g	0.30 g	Coles Crunchy Peanut Butter No Added Salt 20g	0.06	98% less salty
Total snack	0.80 g	Total snack	0.26 g	Save 0.50 g

Lunch

Wattle Valley Soft Wholegrain Wraps 43g	0.90	Freedom Foods Norganic Multigrain Wraps 43g	0.30	71% less salty
Primo Premium Shaved Leg Ham 50g	1.50	Don Shaved Light Leg Ham 50g	0.95	38% less salty
Bega Super Cheese Slices 21g	0.80	Kraft Liveactive Light Cheese Slices 21 g	0.65	17% less salty
Spring Gully Foods Green Tomato Pickle 20g	0.15	Beerenberg Green Tomato Pickle 20g	0.05	65% less salty
Total lunch	3.35 g	Total Lunch	1.95 g	Save 1.40 g

Snack

Coles Fruit Filled Bar (Apple & Cinnamon) 38g	0.30	Weight Watchers Raspberry Pie Bar 38g	0.10	61% less salty
Total snack	0.30 g	Total snack	0.10 g	Save 0.20 g

Dinner

Pastabilities Ravioli Beef with Caramelised Onion and Red Wine in Cracked Black Pepper 350g	3.75	Lean Cuisine Steam Beef and Mushrooms with Pasta Steams in Minutes 350g	1.40	63% less salty
Total dinner	3.75 g	Total dinner	1.40 g	Save 2.4 g

Total salt	8.7 g	Total salt	3.8 g	Salt saved 5 g
-------------------	--------------	-------------------	--------------	-----------------------

Typical Australian daily food intake

By switching to different brands of processed foods, **5g of salt** can be removed from the daily diet.

Global Food Monitoring Group

Aim

To bring together data on nutrient information (or lack thereof) for processed foods that can be used to drive national and international improvements in the food supply

Status

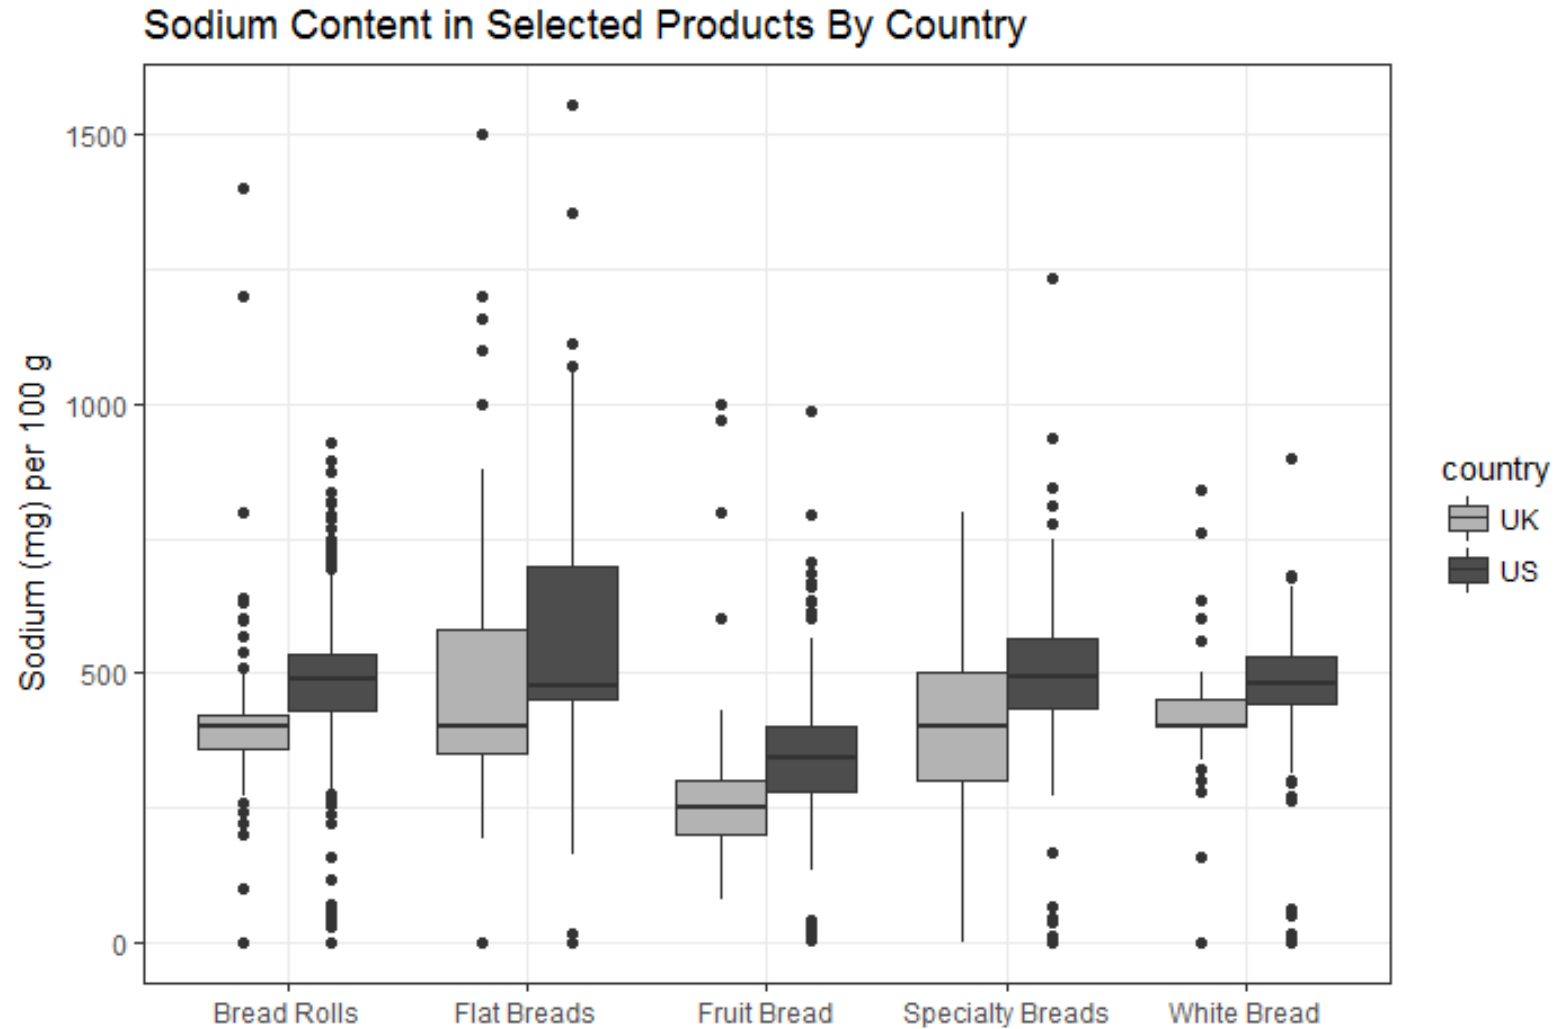

- 31 countries involved (2/3 are LMICs)
- >500,000 individual branded food items

Data to compare healthfulness of foods between countries: UK and Australia

Data to compare healthfulness of foods between countries: UK and USA

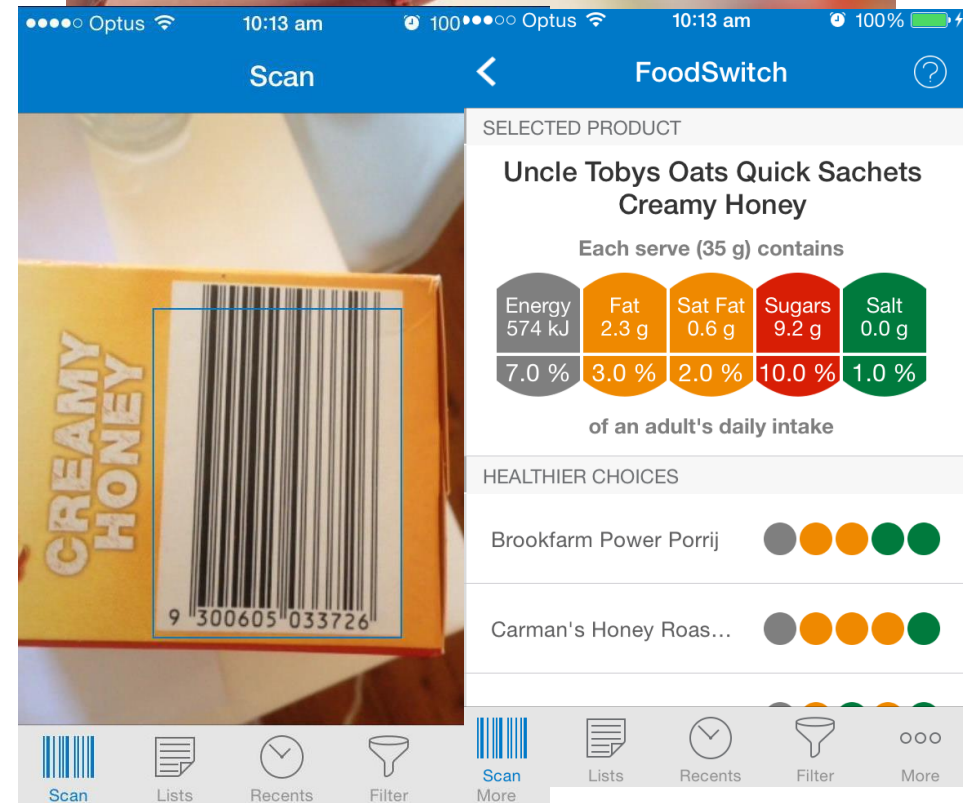

FoodSwitch

FoodSwitch is a mobile phone app that helps consumers make healthier choices at the point of purchase, but—much more importantly—uses crowdsourcing to create a real-time, low-cost surveillance system of the packaged food supply.

The Open Data Initiative

Label Insight is providing academic researchers with complimentary direct access to our unique data set & analysis tools.

This new level of granular food product data not previously available to the research community will aid in advancing critical research topics that affect today's increasingly health conscious food shoppers.

Led by our co-founder Dagan Xavier, the Label Insight Open Data refinery is today's most complete and accurate source for granular product information, encompassing over 400,000 products purchased in the US.

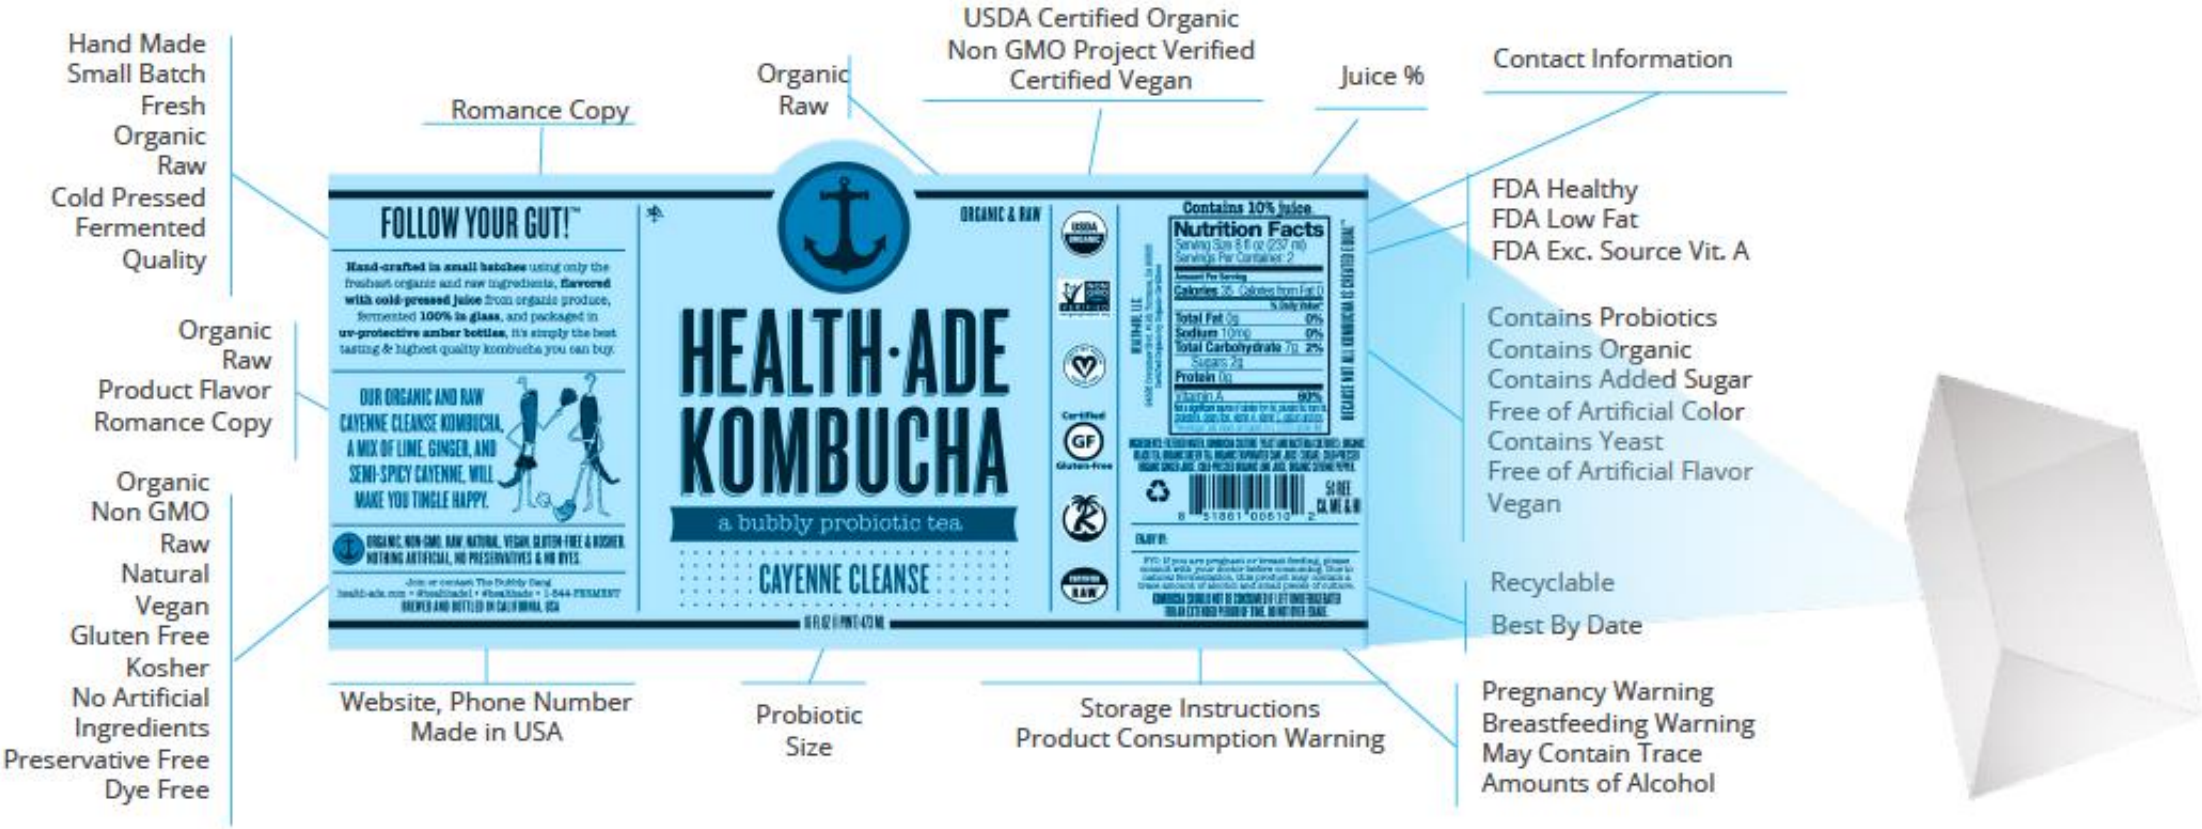

"Our company was founded with the mission of enabling transparency between consumers and the products they use. We believe our technology can be of further help to the academic research community. Label Insight is opening up its data for the advancement of research, learning, and change, to the people who can use the data to make a significant impact." -Label Insight Co-founder, Dagan Xavier

Label Insight: package flat-based data

THE CHALLENGE OF PHYSICAL PACKAGING

Label Insight: label-derived data

EXAMPLE: YOGURT

Label Insight Captures 100% of Text Printed On Label

Nutrition Facts Panel

- Nutrients as printed
- Nutrients standardized to a per 100G & RACC

Full Ingredient Deck

- 350K+ ingredients in the Label Insight dictionary

Certification Analysis

- Kosher Certified
- Kosher Contains Dairy

Marketing Claim Analysis

- Made With Real Fruit
- Naturally and Artificially Flavored
- Excellent Source of Calcium
- Excellent Source of Vitamin D
- Low Fat
- Live Active Cultures
- Creamy
- Partially Produced with Genetic Engineering
- Rich

Derived by Label Insight

Derived = coding analysis beyond what is explicitly on label

Additive Analysis

Using [CODEX](#) Alimentarius International Food Standards

- Contains Yellow 5
- Contains Artificial Color
- Contains Artificial Sweetener
- Contains Artificial Preservative
- Contains HFCS
- Contains Added Sugars

Nutritive Analysis using FDA regulation for marketing claims

- FDA - Excellent Source of Calcium
- FDA - Excellent Source of Vitamin D
- FDA - Good Source of Potassium
- FDA - Good Source of Vitamin A
- FDA - Healthy
- FDA - Low Cholesterol
- FDA - Low Fat
- FDA - Low Sodium
- FDA - Trans Fat Free

Allergen Analysis

Follows FDA [FALCPA](#) Guidelines

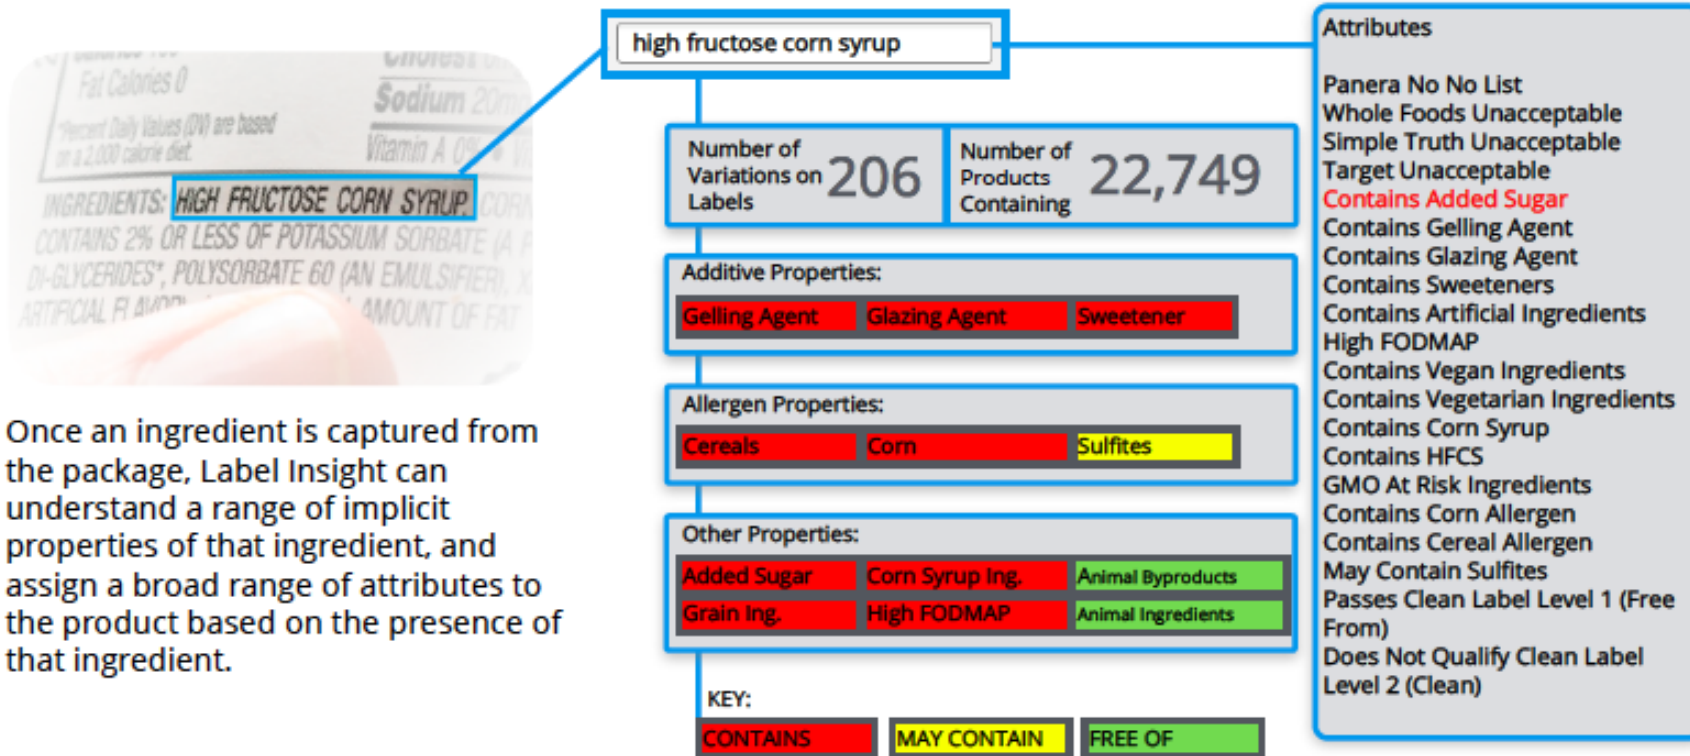

- Contains Milk
- Contains Lactose
- Contains Corn
- Free of Peanuts
- Free of Tree Nuts
- Free of Fish
- Free of Shellfish
- Free of Soy
- Free of Wheat
- Free of Gluten

Ingredient Analysis

- Clean Label Level 1 "Conventional Food"
- Not Vegan
- GMO Risk Corn Ingredients
- Trans Fat Free
- Does not contain probiotics
- List not exhaustive

Label Insight: label-derived data

EXAMPLE: HIGH FRUCTOSE CORN SYRUP

Once an ingredient is captured from the package, Label Insight can understand a range of implicit properties of that ingredient, and assign a broad range of attributes to the product based on the presence of that ingredient.

Sodium per 100 g in the US food supply

Evaluating foods that:

- Meet AHA Heart Check criteria
- Do not meet criteria
- Are close (reformulation candidates)

Aim: Encourage reformulation through transparency and surveillance.

WHO REPLACE: announced May 14, 2018

REPLACE

REVIEW	PROMOTE	LEGISLATE	ASSESS	CREATE	ENFORCE
dietary sources of industrially-produced trans fat and the landscape for required policy change	the replacement of industrially-produced trans fat with healthier fats and oils	or enact regulatory actions to eliminate industrially-produced trans fat	and monitor trans fat content in the food supply and changes in trans fat consumption in the population	awareness of the negative health impact of trans fat among policy-makers, producers, suppliers, and the public	compliance with policies and regulations

WHO REPLACE calls on health departments to

Review dietary sources of industrially-produced trans-fats and how they can be substituted.

Promote the replacement of industrially-produced trans fats with healthier fats and oils.

Legislate, or change regulations to eliminate industrially-produced trans-fats.

Assess and monitor trans-fats content in the food supply and changes in how people consume trans-fats.

Create heightened awareness of the negative health impact of trans-fats among policy makers, producers, suppliers, and the public.

Enforce compliance of policies and regulations.

REVIEWS

Crowdsourcing—Harnessing the Masses to Advance Health and Medicine, a Systematic Review

Benjamin L. Ranard, AB¹, Yoonhee P. Ha, MSc¹, Zachary F. Meisel, MD, MPH, MS^{3,4}, David A. Asch, MD, MBA^{2,3,5,6}, Shawndra S. Hill, PhD⁶, Lance B. Becker, MD⁴, Anne K. Seymour, MS⁷, and Raina M. Merchant, MD, MSHP^{2,3,4}

¹Perelman School of Medicine, University of Pennsylvania, Philadelphia, PA, USA; ²Penn Medicine Center for Innovation, University of Pennsylvania, Philadelphia, PA, USA; ³The Leonard Davis Institute of Health Economics, University of Pennsylvania, Philadelphia, PA, USA; ⁴Department of Emergency Medicine, University of Pennsylvania, Philadelphia, PA, USA; ⁵Philadelphia Veterans Affairs Medical Center, Philadelphia, PA, USA; ⁶The Wharton School, University of Pennsylvania, Philadelphia, PA, USA; ⁷University of Pennsylvania Libraries, University of Pennsylvania, Philadelphia, PA, USA.

OBJECTIVE: Crowdsourcing research allows investigators to engage thousands of people to provide either data or data analysis. However, prior work has not documented the use of crowdsourcing in health and medical research. We sought to systematically review the literature to describe the scope of crowdsourcing in health research and to create a taxonomy to characterize past uses of this methodology for health and medical research.

DATA SOURCES: PubMed, Embase, and CINAHL

should be collected and reported to provide clarity and comparability in methods.

KEY WORDS: crowdsourcing; crowd sourcing; citizen scientist; citizen science; human computing.

Examples of crowdsourcing tasks by domain

Task	Example
Problem solving	Foldit: online platform for predicting proteins' 3 ^o structure
Data processing	MalariaSpot: online game to tag images of parasites on thick smears containing <i>Plasmodium falciparum</i> at medium to low parasitemias
Surveillance or monitoring	MyHeartMap Challenge: mapping AEDs via smartphone photographs
Surveying	Amazon MTurk for survey administration to capture a wider range of participants more quickly

Logistics of Crowdsourcing/Crowd Worker Characteristics

Data were collected across the following domains:

- Microtasks versus mega task
- Platform, validation, comparison with experts
- Monetary or other incentives, training, qualifications
- Number of crowd workers and their characteristics

N=202 studies (9 RCTs)

Median (IQR) crowd size: 424 (167, 802)

Median (IQR) age: 34 (32, 36) years

Leading task: data processing

Poor description of crowdsourcing logistics and crowd characteristics

Labor market platform: 94%

Previous experience necessary: 54%

Compensation: 50%, \$1 or less per task

Task time: 1 minute

Validation: 12%

Should/could FoodSwitch pursue FDA regulation as a mobile medical app?

SaMD=Software as Medical Device

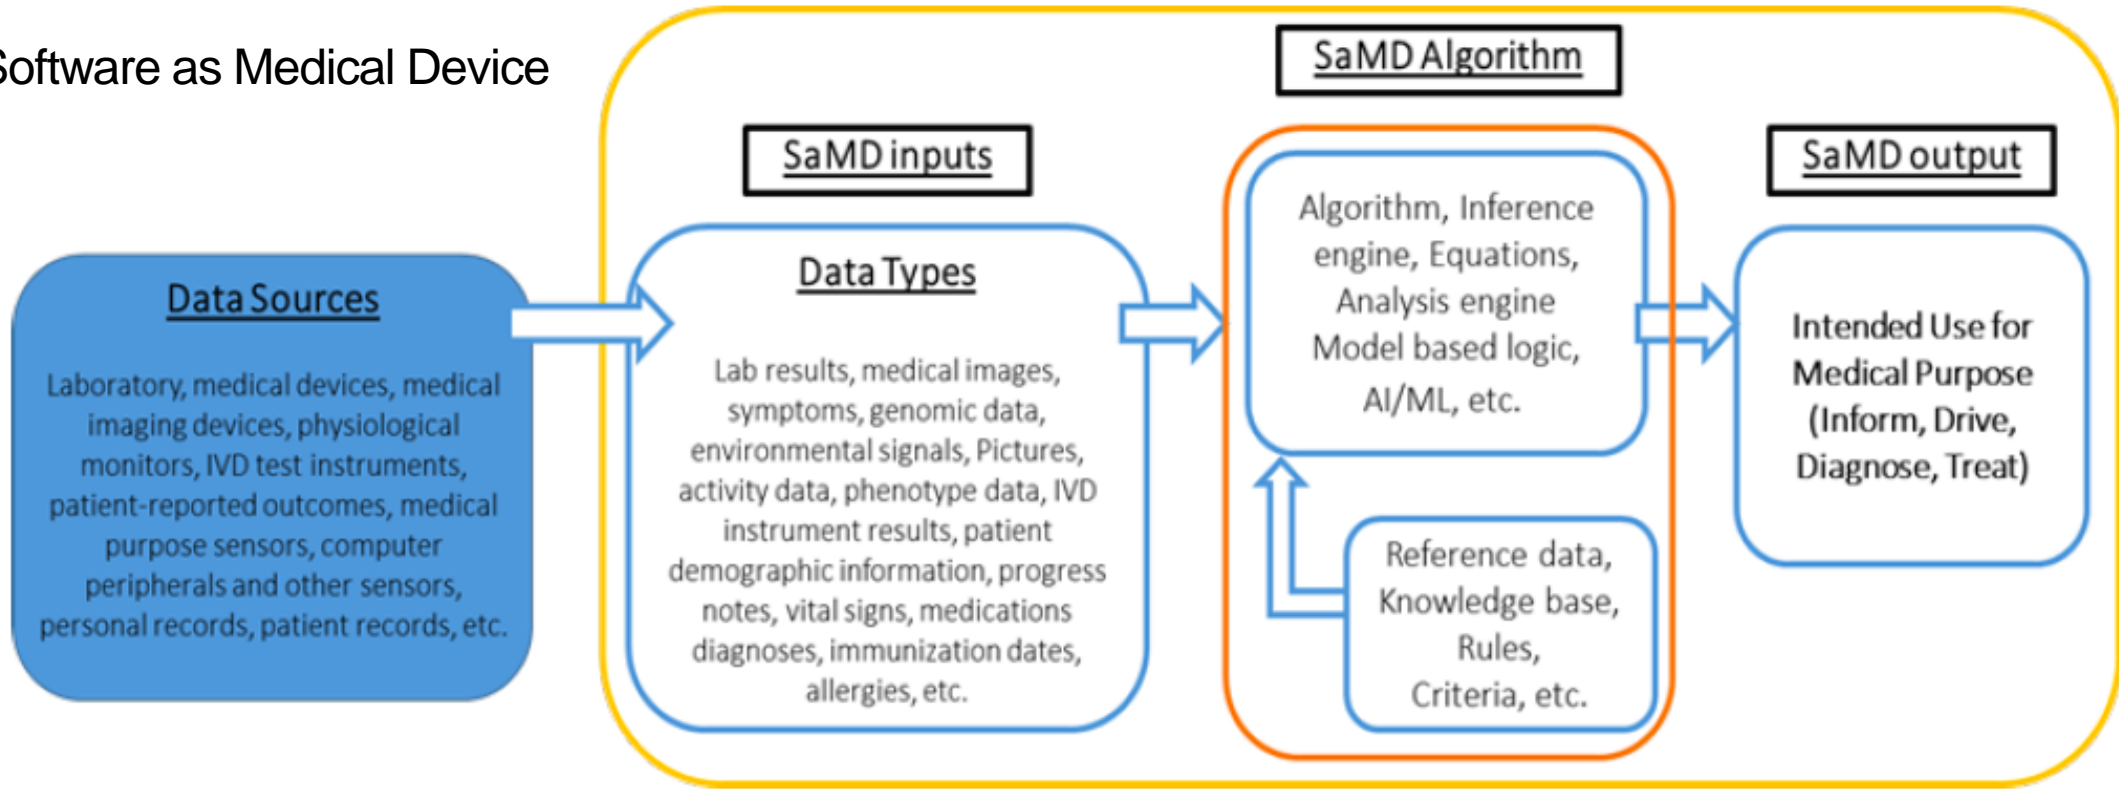

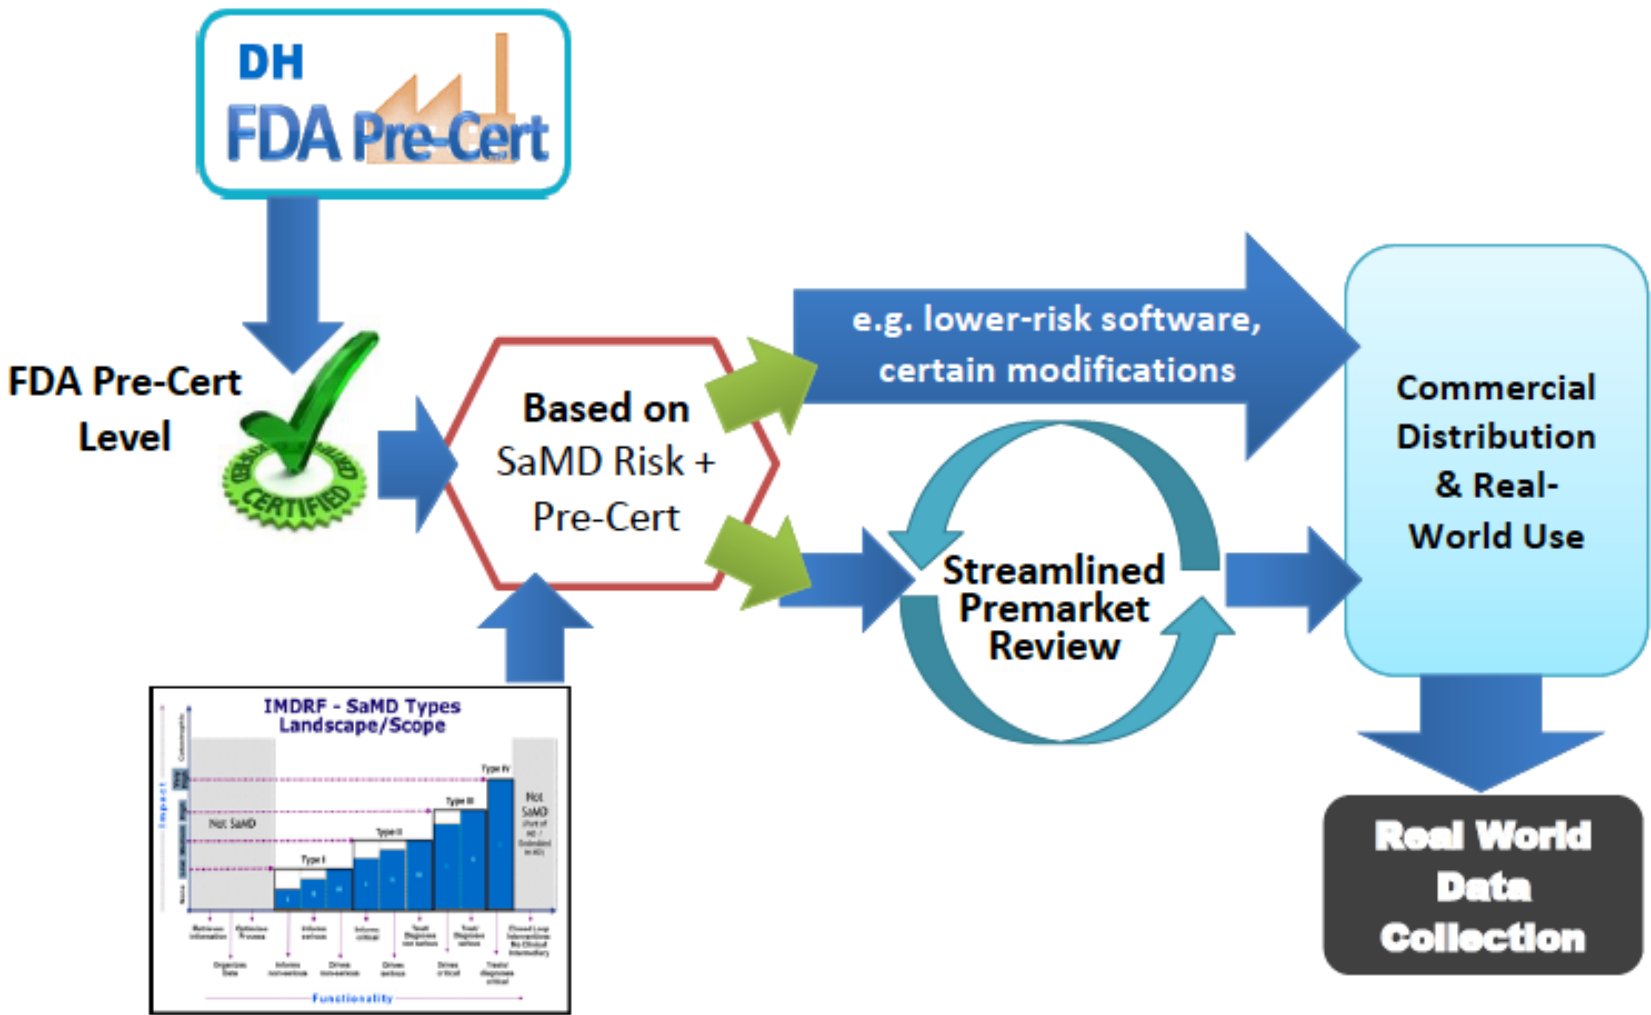

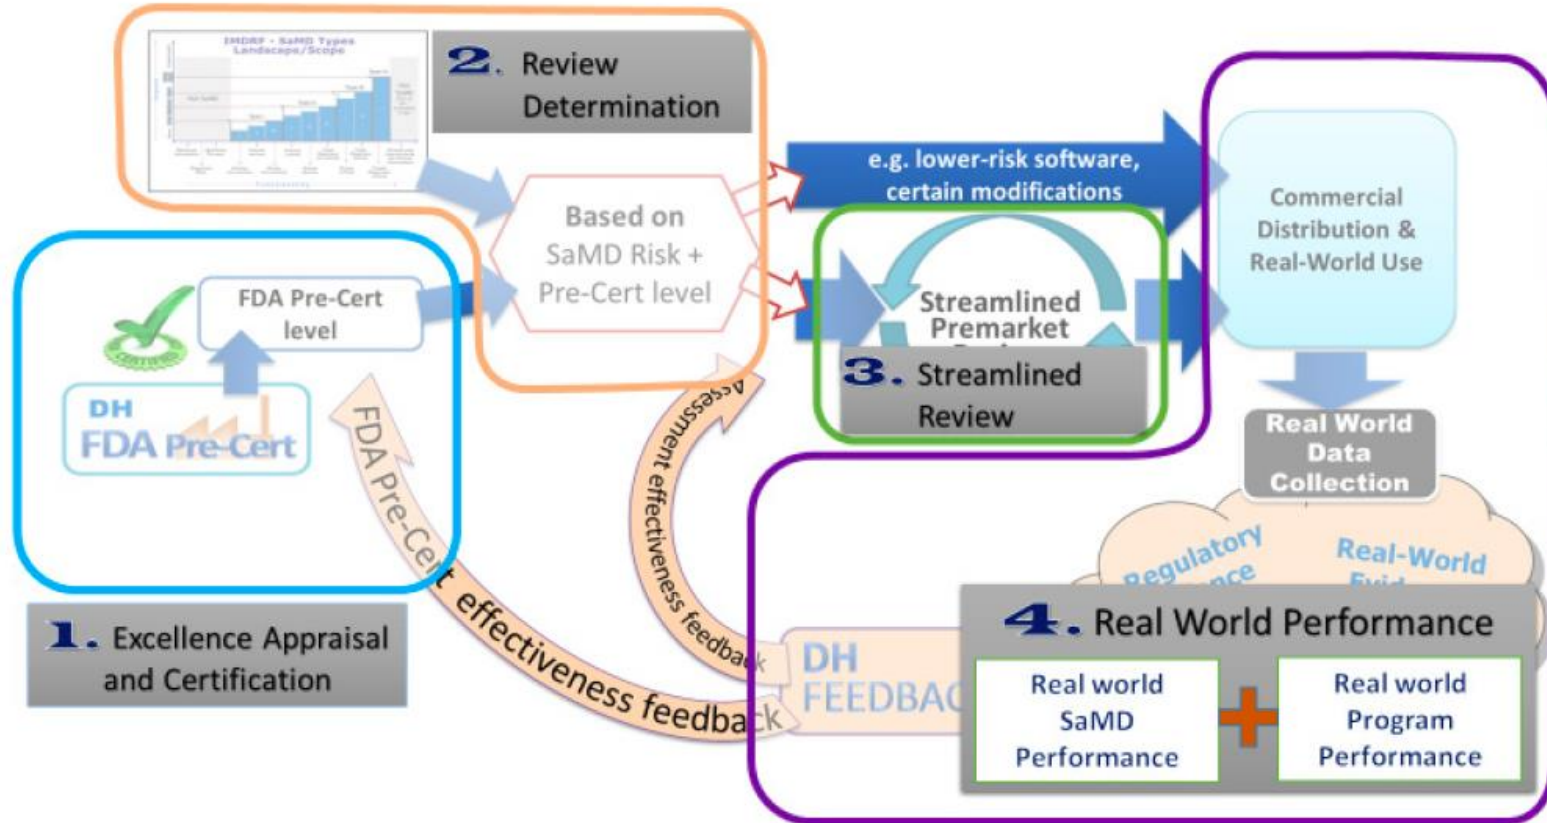

Figure 1. Description of SaMD, including possible data sources from which inputs are derived and that may be used for one or more medical purposes.

Should/could FoodSwitch pursue FDA regulation as a mobile medical app?

FDA Software Pre-Certification Program aims to provide more streamlined and efficient regulatory oversight of software-based medical devices from manufacturers who have demonstrated a robust culture of quality and organizational excellence (CQOE) and are committed to monitoring real-world performance

Should/could FoodSwitch pursue FDA regulation as a mobile medical app?

FDA Software Pre-Certification Program aims to provide more streamlined and efficient regulatory oversight of software-based medical devices from manufacturers who have demonstrated a robust culture of quality and organizational excellence (CQOE) and are committed to monitoring real-world performance

Take Home Points

Surveillance of the global packaged food supply is necessary to improve its healthfulness: trans fats and salt are exemplars.

FoodSwitch is a mobile phone app that uses crowdsourcing for packaged food surveillance on a brand-level and is available in the US.

Crowdsourcing is an increasingly prevalent approach for mutual reinforcing activities of generating ideas, data collection, and community engagement.

Mobile- and online-based trials provide opportunities for lower cost, scalable interventions yet require new partnerships for sustainability.

Download FoodSwitch for iOS or Android

The image shows the app store page for FoodSwitch USA and four screenshots of the app's interface. The app store page features a blue icon with a shopping basket and two arrows, the title 'FoodSwitch USA', the category 'FoodSwitch Health & Fitness', a 3-star rating, and an 'Everyone' age rating. Below the app name is a note: 'This app is compatible with your device.' There are buttons for 'Add to Wishlist' and 'Install'.

The four screenshots illustrate the app's workflow: 1) A hand holding a jar of food. 2) A barcode scanner interface with a 'Scan' button and a 'LISTS' tab. 3) A detailed nutrition label for 'Brand A Packaged Food Product' showing values for Energy (146kJ/35kcal), Fat (0.0g), Sat Fat (0.0g), Sugars (7.5g), and Salt (0.0g), along with a 'HEALTHIER CHOICES' section. 4) A list of other brands (Brand B, C, D) with their respective nutrient profiles.

Brand	Energy	Fat	Sat Fat	Sugars	Salt
Brand B Packaged Food Product	42/10	LOW	LOW	MED	LOW
