## Four industrial revolutions

### FOURTH

The digital revolution—characterized by a fusion of technologies—blurs the lines between physical, digital, and biological spheres.

# DATA DELUGE

## **PROGRESS ON MULTIPLE DIMENSIONS**

- Biomolecular and integrative physiology
- Current version of electronic health records
  - Claims
  - Clinical records
- Behavioral phenotypes and social interactions
- Geospatial
- Time

## **CRITICAL ISSUES IN NEED OF PROGRESS**

- Continued focus on curating the data (“data janitorship”)
- Connecting clinicians and people (consumers, patients, carers) in functional networks to advance knowledge
- Culture and ethics
  - Veracity (synonyms: truthfulness, truth, accuracy, correctness, faithfulness, fidelity)
  - Privacy and confidentiality
  - Monitoring the function of the system
  - Data sharing
  - Priority setting

## WHAT IS THE PROJECT BASELINE STUDY?

A coalition to develop gold standard data, tools and technologies to provide a holistic view of human health and more efficiently and effectively conduct clinical research.

# Deep molecular profiling

## AUTOMATION

**~6TB**  
data per subject

- External/at clinic site
- In-house
- External

# Continuous monitoring through passive sensors

## Sleep sensor

Commercially available, placed under mattress to passively monitor multiple physiologic data parameters

## Study watch

Investigational wrist-worn sensor for continuous recording of physiological and environmental data

## Study hub

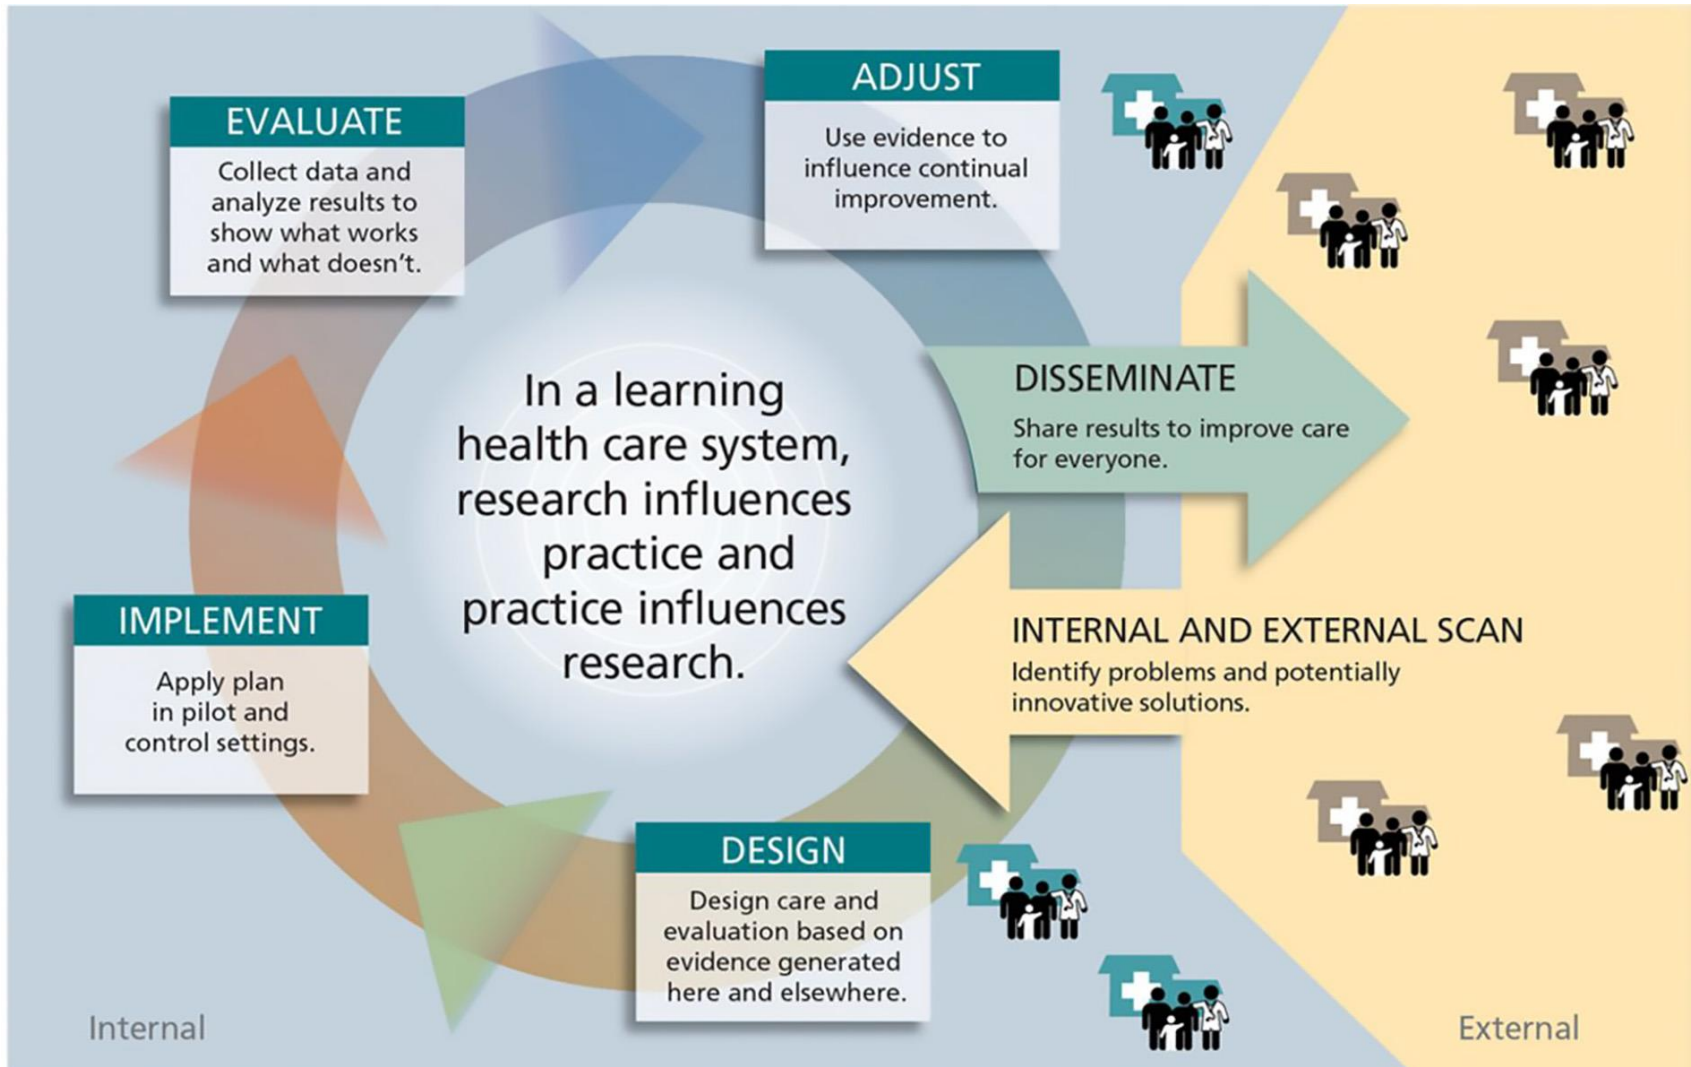

Safely sends device data to secure, encrypted Baseline database

## App

Mobile interface for self-reported and passive data acquisitions

# Learning health care systems

# Demonstration Project Overview

10 Demonstration  
Projects spanning 12  
NIH institutes and  
centers

1-year planning phase  
(UH2)

Implementation phase  
(UH3)

We face many important, unanswered **questions** about health care.

But our current research system is not set up to answer these questions in the most **useful** and **efficient** way.

We need to link **patients, clinicians, health systems, and researchers as partners.**

And harness health **data** to foster **knowledge** that can lead to **better care.**

Together, **partners** can decide what questions to study and how to use the data.

And get **answers** more quickly to the health and healthcare questions that matter most.

A collaborative **national resource** using the power of **partnerships** and **health data** for better research.

That's the vision of

With sites and partners in every state...

...And protection of patients' privacy and data security.

# PCORnet® embodies a “network of networks” that harnesses the power of partnerships

20  
Patient-Powered  
Research Networks

people-centered clinical  
research

# The ADAPTABLE Aspirin Study

A national resource for conducting patient-centered research harnessing the power of health data.

## THE QUESTION

Clinicians often prescribe aspirin to prevent strokes and heart attacks in people living with heart disease. Research has yet to determine the best dose to use, since aspirin can cause serious side effects – like bleeding – in some people.

## THE PROBLEM

Heart disease is the No. 1 killer in the U.S.

**611,000**

people in 2013, one death in 4; accounting for 1 in every 6 healthcare dollars.

Cardiovascular disease (heart attack and stroke) is the most common form of heart disease.

Heart disease strikes someone in the U.S. about once every **43 seconds**.

Aspirin is widely prescribed to prevent heart attacks and strokes in people living with heart disease.

**60%**

of patients with heart disease take a 325 milligram dose each day while 36% take 81 milligrams (or baby aspirin).

PCORnet is an initiative of the Patient-Centered Outcomes Research Institute.

## THE STUDY

The ADAPTABLE trial will compare two common aspirin dosages.

325 mg

81 mg

The study will be large and will involve patients across the U.S.

**20,000**

patients living with heart disease will use a daily aspirin dose of either 81 mg or 325 mg.

ADAPTABLE will use PCORnet to conduct the study and disseminate results. Patients will be partners at every stage of the trial, which will collect data using tools with state-of-the-art security.

## ANSWERS FOR BETTER CARE

Results of this study will help patients and their caregivers answer questions like:

- How much aspirin should I take each day to reduce my risk of another heart attack or stroke?
- Do the benefits of taking aspirin every day differ based on the dose?
- Do the risks differ based on the dose?
- Based on my health, age, and other circumstances, what's the best dose to protect my health?

This study will use the power of PCORnet to seek answers to these questions and improve patient care and outcomes.

DATA

KNOWLEDGE

CARE

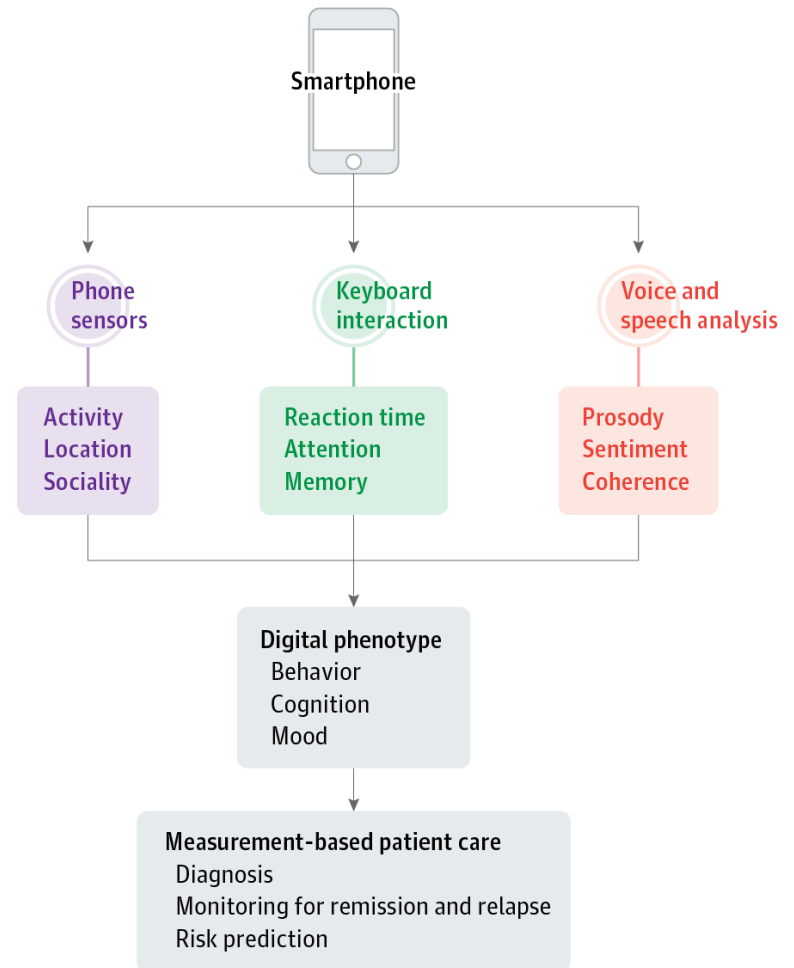

Identifying the aspirin dose that works best could prevent as many as

**88,800**  
deaths per year worldwide

## The process of digital phenotyping

Digital phenotyping involves collecting sensor, keyboard, and voice and speech data from smartphones to measure behavior, cognition, and mood.

**1 in 20**

searches are  
health related

## Our Mission:

Make health information  
universally accessible  
and useful.

# Information **structure**

**Measles**  
Also called: rubeola

ABOUT SYMPTOMS TREATMENTS

A viral infection that's serious for small children but is easily preventable by a vaccine.

## Very rare

645 US cases in 2014

-  Preventable by vaccine
-  Treatable by a medical professional
-  Requires a medical diagnosis
-  Lab tests or imaging often required
-  Spreads easily
-  Short-term: resolves within days to weeks

Measles symptoms don't appear until 10 to 14 days after exposure. They include cough, runny

**Measles**  
Also called: rubeola

ABOUT SYMPTOMS TREATMENTS

**Requires a medical diagnosis**  
Measles symptoms don't appear until 10 to 14 days after exposure. They include cough, runny nose, inflamed eyes, sore throat, fever, and a red, blotchy skin rash.

### People may experience:

- Pain areas:** in the muscles
- Cough:** can be dry or severe
- Whole body:** fatigue, fever, loss of appetite, or malaise
- Nasal:** redness, runny nose, or sneezing
- Skin:** rashes or red spots
- Also common:** eye irritation, headache, pink eye, sensitivity to light, sore throat, or swollen lymph nodes

- Fever
- Dry Cough
- Runny nose
- Rash

**Measles**  
Also called: rubeola

ABOUT SYMPTOMS TREATMENTS

**Treatable by a medical professional**  
There's no treatment to get rid of an established measles infection, but over-the-counter fever reducers or vitamin A may help with symptoms.

**Prescription**  
Vitamin A

**Self-treatment**  
**Pain reliever:** Acetaminophen (Tylenol)

**Also common**  
MMR vaccine

### Specialists

- Primary care provider (PCP):** Prevents, diagnoses, and treats diseases.
- Infectious disease doctor:** Treats infections, including those that are tropical in nature.
- Pediatrician:** Provides medical care for infants, children, and teenagers.

Consult a doctor for medical advice

## PRODUCT OVERVIEW: What is PHQ-9?

PHQ-9 is a Patient Health Questionnaire, with 9 questions, that is used to measure depression severity

PATIENT HEALTH QUESTIONNAIRE - 9				
Over the <u>last 2 weeks</u> , how often have you been bothered by any of the following problems?	Not at all	Several days	More than half the days	Nearly every day
1. Little interest or pleasure in doing things	0	1	2	3
2. Feeling down, depressed, or hopeless	0	1	2	3
3. Trouble falling or staying asleep, or sleeping too much	0	1	2	3
4. Feeling tired or having little energy	0	1	2	3
5. Poor appetite or overeating	0	1	2	3
6. Feeling bad about yourself — or that you are a failure or have let yourself or your family down	0	1	2	3
7. Trouble concentrating on things, such as reading the newspaper or watching television	0	1	2	3
8. Moving or speaking so slowly that other people could have noticed? Or the opposite — being so fidgety or restless that you have been moving around a lot more than usual	0	1	2	3
9. Thoughts that you would be better off dead or of hurting yourself in some way	0	1	2	3

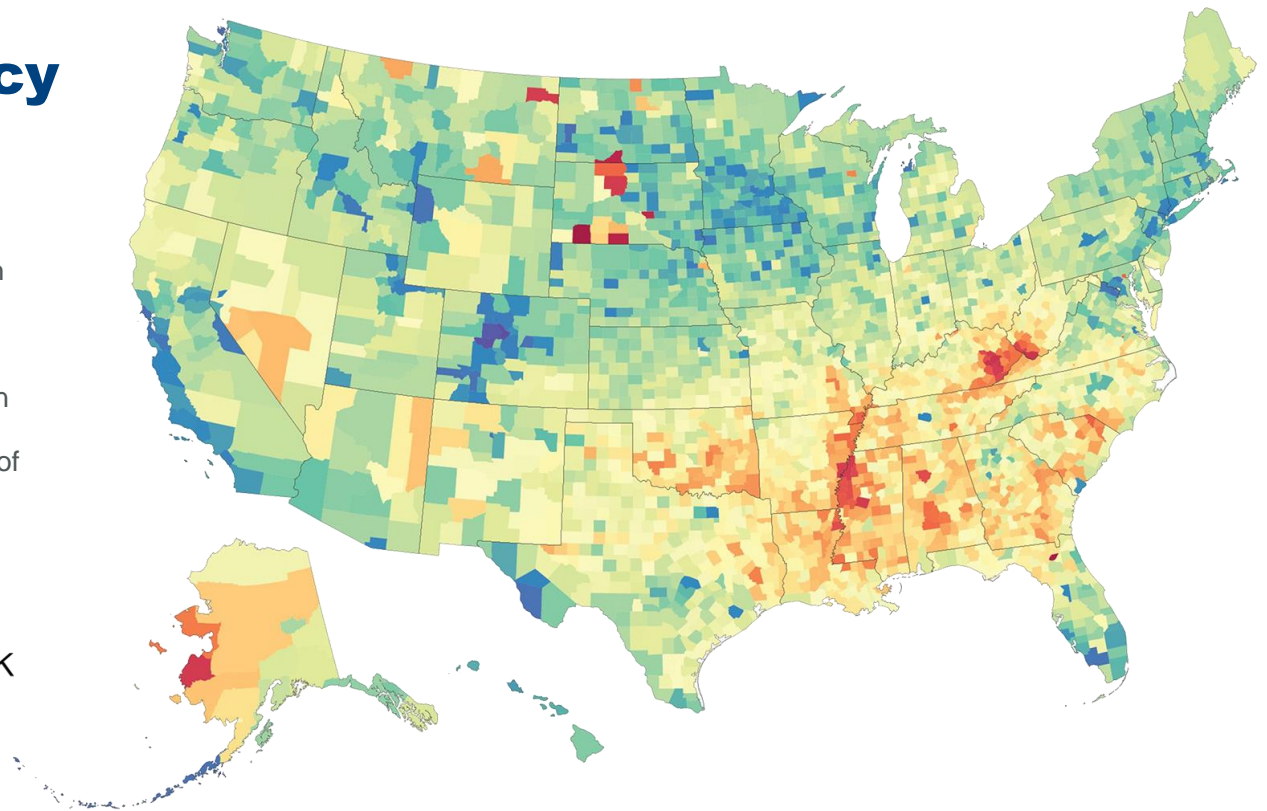

Life expectancy at birth (years):

## Life expectancy at birth by county, 2014

Counties in South Dakota and North Dakota had the lowest life expectancy, and counties along the lower half of the Mississippi, in eastern Kentucky, and southwestern West Virginia also had very low life expectancy compared with the rest of the country. Counties in central Colorado had the highest life expectancies.

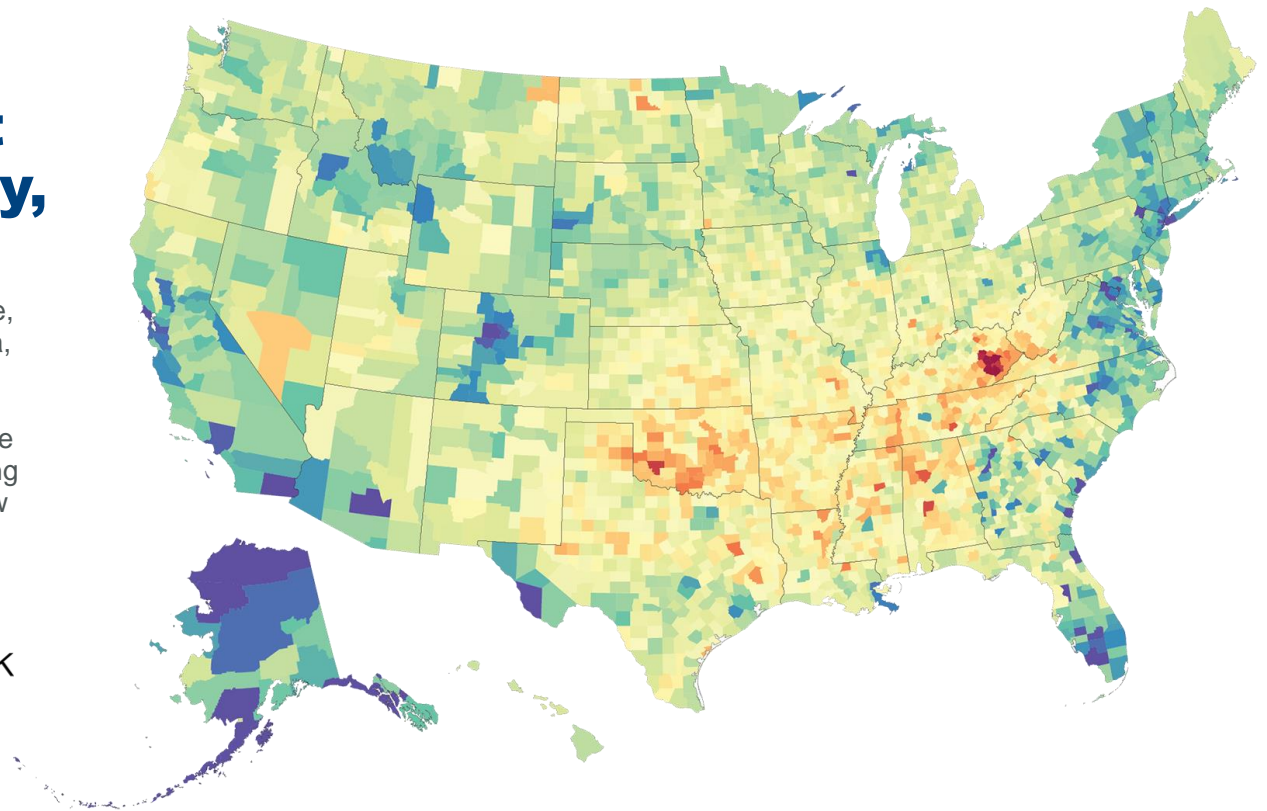

The **JAMA** Network

## Change in life expectancy at birth by county, 1980 to 2014

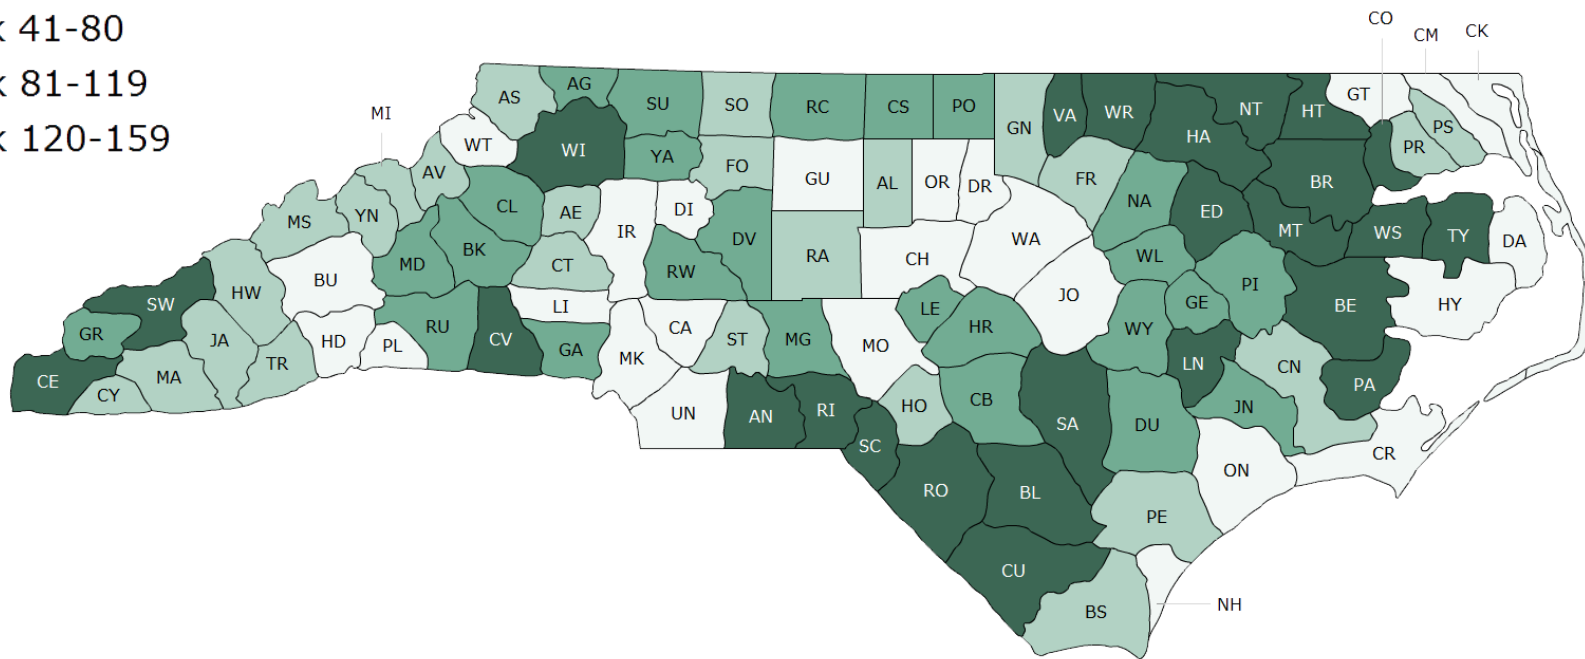

Compared with the national average, counties in central Colorado, Alaska, and along both coasts experienced larger increases in life expectancy between 1980 and 2014, while some southern counties in states stretching from Oklahoma to West Virginia saw little, if any, improvement over this same period.

The **JAMA** Network

## This same dynamic can be seen in North Carolina...

- Rank 1-40
- Rank 41-80
- Rank 81-119
- Rank 120-159

**...contrast with poorer outcomes in rural counties in southern and eastern NC.**

<http://www.countyhealthrankings.org/app/north-carolina/2018/overview>

[https://www.rwjf.org/en/library/interactives/whereliveaffectshowlongyoulive.html?cid=xw\\_rwjf\\_unpd\\_ini:reply\\_dte:2018030\\_1](https://www.rwjf.org/en/library/interactives/whereliveaffectshowlongyoulive.html?cid=xw_rwjf_unpd_ini:reply_dte:2018030_1)

## Of note

Although ranked 11th out of 100 for health outcomes and 7th out of 100 for life expectancy, Durham County life expectancy remains slightly below the national average.

- Rank 1-40
- Rank 41-80
- Rank 81-119
- Rank 120-159

# Big Challenges in Biomedicine

- **Lack of significant information over time dimension**
  - Measurements to assess biology and human health are made periodically in visits to healthcare or for research
- **Missing systems biology**
  - When developing concepts of human biology or drug development we make limited measurements focused on specific mechanisms —we look “under the lamppost”
- **Missing the opportunity to measure interactions of biology, sociology, environment and decision-making that could enable optimization of individualized and population health**
  - Although we know that health and disease are the product of the interactions of genes, multiple derivative biological systems, environment, social context and personal decisions, we tend to look at one part of the time

**Technology advances; people stay the same.**

# Facebook Fiasco

What Zuckerberg should do

## Facebook faces a reputational meltdown

*This is how it, and the wider industry, should respond*

Print edition | Leaders >

Mar 22nd 2018

LAST year the idea took hold that Mark Zuckerberg might run for president in 2020 and seek to lead the world's most powerful country. Today, Facebook's founder is fighting to show that he is capable of leading the world's eighth-biggest listed company or that any of its 2.1bn users should trust it

# The Guardian

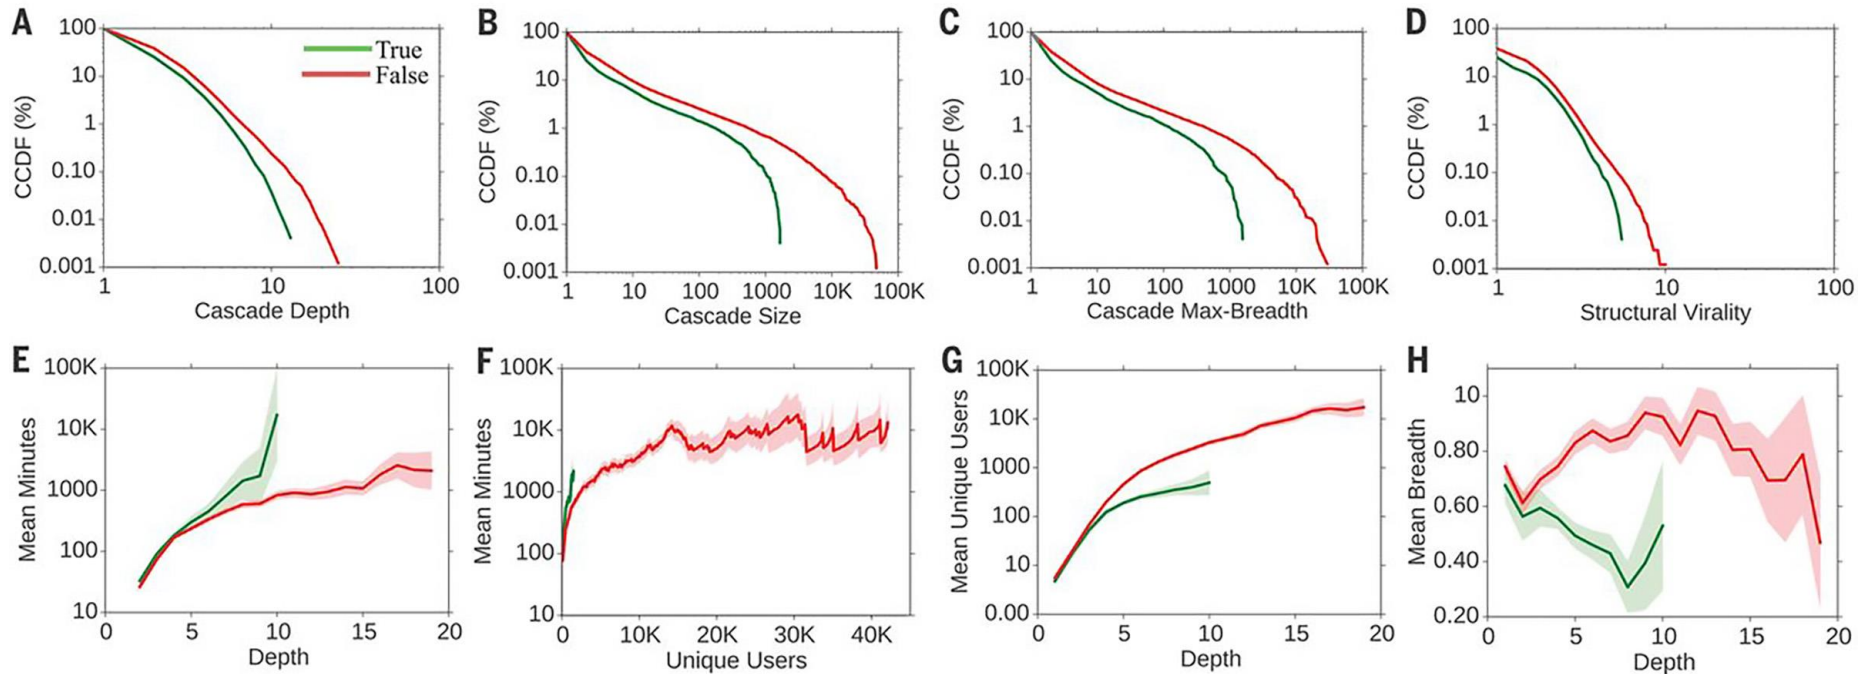

## Facebook: is it time we all deleted our accounts?

The Cambridge Analytica revelations may be the final nudge we need to turn away from the social network. And it's only the tip of the iceberg when it comes to big tech harvesting private information

# Complementary cumulative distribution functions (CCDFs) of true and false rumor cascades

**Long Live the "Medical Data Janitors": International Data Quality Assurance Practices in Distributed Data Networks**

**Author Block:** Judith C. Maro<sup>1</sup>, Christian G. Reich<sup>2</sup>, Keith Marsolo<sup>3</sup>, Yoshiaki Uyama<sup>4</sup>, Kristian B. Fillion<sup>5</sup>, Miriam C. J. M. Sturkenboom<sup>6</sup>. <sup>1</sup>Harvard Medical School and Harvard Pilgrim Health Care Institute, Boston, MA; <sup>2</sup>IQVIA, Cambridge, MA; <sup>3</sup>Cincinnati Children's Hospital Medical Center, Cincinnati, OH; <sup>4</sup>Pharmaceuticals and Medical Devices Agency, Tokyo, Japan; <sup>5</sup>McGill University, Montreal, QC, Canada; <sup>6</sup>University Medical Center Utrecht, Utrecht, Netherlands

**Proposal / Abstract:**

**Background:** Ensuring data quality for distributed data networks is challenging.

**Objectives:** We will examine international practices in five distributed data networks that house a mixture of administrative claims data and electronic health record data including: the U.S. Food and Drug Administration's (FDA's) Sentinel Initiative (Sentinel), the FDA's Biologics Effectiveness and Safety (BEST) Initiative, the U.S. National Patient Centered-Clinical Research Network (PCORnet), Japan's Medical Information Database Network (MID-NET), and the Canadian Network for Observational Drug Effect Studies (CNODES).

## How it works: analytics and data science

### Ask the right questions

- Tap knowledge to specify the question that defines the challenge

### Find the right data

- Examine all data sources (access, feasibility, content, quality)

### Optimize methods

- Tailor methods to address the question
- Develop new tools to improve analytics

### Decide wisely

- Improve health
- Improve care
- Reduce cost
- Improve clinical practice

## The grand fusion

Melding strengths across disciplines and between professionals

Fostering the **comprehensive toolbox across the spectrum** including frequentist statistics, Bayesian statistics, machine learning, and deep learning

Developing the **right framework for teams** including clinicians and quantitative expertise

- Biostatistics and bioinformatics
- Population health
- Clinical research
- Research training and support
- Oversight and quality assurance
  
- Basic science departments
- Clinical departments
- Clinical research units
  
- Engineering
- Computer science
- Statistical science
- Big data analytics

# Policy efforts underpinning RWE push

## Cures provisions (Sec. 3022)

- Requires FDA to establish a program to evaluate the potential use of real world evidence to:
  - Help support the approval of new indications for an approved drug
  - Help support or satisfy post approval study requirements

## PDUFA RWE provisions

- Tracks with Cures Act
- Requires FDA to establish a program to evaluate the potential use of real world evidence to:
  - Help support the approval of new indications for an approved drug
  - Help support or satisfy post approval study requirements

## Reinforcing of a Learning Health Care System:

- Doesn't change approval standards, rather it better supports and enables use of data and evidence on outcomes that are hard to get from traditional RCTs (e.g., outcomes that are too costly, too small populations with particular clinical features, too long follow-up needed, diff impact in diff clinical settings, etc.)
- Learning from real-world patient experiences can support better informed health care decision-making by a range of stakeholders

# The New Einsteins Will Be Scientists Who Share

*From cancer to cosmology, researchers could race ahead by working together—online and in the open*

By MICHAEL NIELSEN

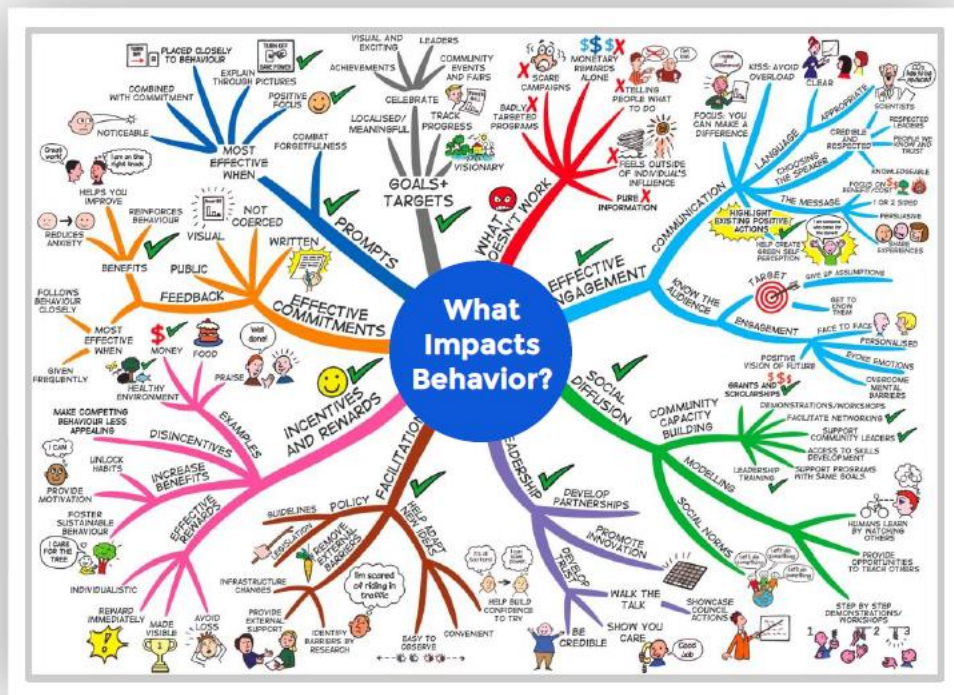

In January 2009, a mathematician at Cambridge University named Tim Gowers decided to use his blog to run an unusual social experiment. He picked out a difficult mathematical problem and tried to solve it completely in the open, using his blog to post ideas and partial progress. He issued an open invitation for others to contribute their own ideas, hoping that many minds would be more powerful than one. He dubbed the experiment the Polymath Project.

Several hours after Mr. Gowers opened up his blog for discussion, a Canadian-Hungarian mathematician posted a comment. Fifteen minutes later, an Arizona high-school math teacher chimed in. Three minutes after that, the UCLA mathematician Terence Tao commented. The discussion ignited, and in just six weeks, the mathematical problem had been solved.

## Data Activation and Testing Outcomes

## Digital Transformation

- Data on premise, hard to access, analyze and use
- Productivity tools built for individual, local usage
- IT focusing on **where** it computes

- Data stored in cloud, simple to query
- Collaborative, cloud based productivity applications
- Machine learning drives deep, actionable insights
- IT changing **how** it computes

## **CRITICAL ISSUES IN NEED OF PROGRESS**

- Continued focus on curating the data (“data janitorship”)
- Connecting clinicians and people (consumers, patients, carers) in functional networks to advance knowledge
- Forming the right teams to convert data into knowledge
- Culture and ethics
  - Privacy and confidentiality
  - Monitoring the function of the system
  - Data sharing
  - Priority setting

# Data Scientist: *The Sexiest Job of the 21st Century*

**Meet the people who can coax treasure out of messy, unstructured data.**  
by Thomas H. Davenport and D.J. Patil

**W**hen Jonathan Goldman arrived for work in June 2006 at LinkedIn, the business networking site, the place still felt like a start-up. The company had just under 8 million accounts, and the number was growing quickly as existing members invited their friends and colleagues to join. But users weren't seeking out connections with the people who were already on the site at the rate executives had expected. Something was apparently missing in the social experience. As one LinkedIn manager put it, "It was like arriving at a conference reception and realizing you don't know anyone. So you just stand in the corner sipping your drink—and you probably leave early."

The shortage of data scientists is becoming a serious constraint in some sectors.
