

*HCS partnerships:* What kinds of research questions can be effectively pursued in partnership with health care systems? What are the strengths and limitations in current systems for partnering with HCS' s?

What have we learned so far? What can the NIH help these partnerships improve?

*Role of patients and clinicians in the research process:* What should we be doing to strengthen the role of patients and clinicians in the development and implementation of large studies and in the dialog about the regulatory oversight?

*NIH-PCORI synergism:* How can we strengthen the potential synergisms between the NIH and PCORi generally – and PCORnet specifically?
