# Update on the *Living Textbook*

Jonathan McCall, MS Senior Editor, DCRI Communications Managing Editor, *Rethinking Clinical Trials* Duke Clinical Research Institute jonathan.mccall@duke.edu

# Previous Milestones

- First content drafting starts mid-2013
- Living Textbook goes live on November 1, 2013 with three topic chapters
- Grand Rounds presentation in December of 2013

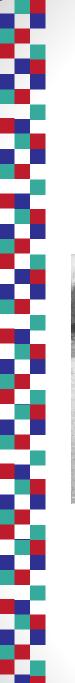

Health Care Systems Research Collaboratory

# The Original Version

Lara M. Beskow, MPH, PhD Asociate Professor Dake Clinical Research Institute Durham, NC Informed consent describes a process for enabling individuals to make voluntary decisions about participating in research with an understanding of the purpose, procedure risks, and benefits of the investigation, as well as alternatives to participating. As described below, the basis for informed consent—including the requirement to obtain consent, situations in which that requirement might be modified or waived, and the content of the information provided—is grounded both in ethical principles and government regulations. Intel for the investigation of the protection of human research, known as the element papert, this landmait document defines three fundamentar ethical principles for research involving human participants: Respect for Persons – that competent individuals should be treated as autonomous (self-determining) agents, and that persons with diminished autonomy are entitled to protection; Beneficer – that persons are treated in an ethical manner not only by respecting their decisions and protecting them from ham, but also by making efforts to secure their well-being; and Justice – that the benefits and burdens of research be distributed fairly. Beneficer – that persons are treated in an ethical manner not only by respecting their decisions and protecting them from ham, but also by making efforts to secure their well-being; and Justice – that the benefits and burdens of research be distributed fairly. Beneficer – that persons are treated in an ethical manner not only by respecting their decisions and protecting them from ham, but also by making efforts to secure their well-being; and Justice – that persons are treated in an ethical manner not only by respecting their decisions and protecting them from ham, but also by making efforts to secure their well-being; and Justice – that the benefits and burdens of research be distributed fairly. #### Welcome

Welcome to the NIH Collaboratory's Rethinking Clinical Trials: A Living Textbook of Pragmatic Clinical Trials! The Living Textbook is designed to provide a complete suite of information on how to understand, design, conduct, analyze & disseminate pragmatic clinical trials (PCTs). Although structured like a textbook, its web-based formatting allows us to deliver a flexible, continuously updatable reference with high-quality, expertly curated content.

"Our goal in creating *Rethinking Clinical Trials* is to provide a living document to guide the many different people with an interest in practical (or 'pragmatic') clinical trials and health systems research."

-Robert M. Califf, MD NIH Collaboratory Principal Investigator

The Living Textbook is organized into chapter-like "topics" written by subject matter experts in close collaboration with writers/editors at the NIH Collaboratory Coordinating Center. Through an iterative drafting process, articles on specific topics and subtopics relating to pragmatic clinical trials are published and expanded over time. The descriptive text is designed for multiple audiences, including both new and experienced researchers and clinical trialists; clinicians; patient advocates; and patients interested in participating in clin-

#### Informed Consent Introduction

- LT Blog

- Easier and more appealing for users
- Content can be loaded and modified much faster thanks to userfriendly interface
- Better compatibility across browsers
- Works well on mobile

Health Care Systems Research Collaboratory

### **New Milestones**

- Existing content ported to WordPress
- New site going live in days
- Two new topic chapters (Patient-Reported Outcomes and Regulatory Issues "stub" article) completed and in final stages prior to release
- Other topics in active development
- "LT Blog" added to capture fast-moving developments
- Two new FTE writers/editors coming on board
  - One hired; starting March 1
  - Second position open and expected to be filled by April 1
- Moving to dedicated "Living Textbook" domain?
