STUDY AT A GLANCE

STUDY QUESTION AND SIGNIFICANCE
Nursing homes are often charged with guiding patients through decisions about the direction of their treatment. Identifying effective approaches that nursing homes can use to better promote goal-directed care within existing resources is a research, public health, and clinical priority. Yet, evidenced-based approaches to advance care planning in nursing homes are lacking. The objective of the study was to test the effect of an advance care planning video program on hospital transfers, burdensome treatments, and hospice enrollment among long-stay nursing home residents.

FINDINGS
There was no significant reduction in hospital transfers per 1000 person-days alive among residents with advanced illness. Secondary outcomes did not significantly differ between groups among residents with and without advanced illness. Only 912 of 4171 residents with advanced illness viewed the advance care planning videos. Facility-level rates of showing the videos ranged from 0% to more than 40%.

DESIGN AND SETTING
Cluster randomized trial with 197,692 residents in 360 nursing homes in 32 states owned by 2 for-profit corporations, of which 241 facilities were randomly assigned to the control group and 119 facilities were randomly assigned to the intervention.

CONCLUSIONS AND RELEVANCE
The advance care planning video program was not effective in reducing hospital transfers, decreasing burdensome treatment use, or increasing hospice enrollment among long-stay nursing home residents with or without advanced illness. The low level of intervention fidelity highlights the challenges of implementing new programs in nursing homes.
GENERALIZABLE LESSONS

<table>
<thead>
<tr>
<th>Challenge</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low implementation fidelity</td>
<td>High level of buy-in from frontline staff responsible for implementing the program, and strong endorsement from healthcare system leadership</td>
</tr>
<tr>
<td>Healthcare system interactions</td>
<td>Strong relationships with healthcare systems before the study; study-specific project manager in each healthcare system to oversee the project and serve as liaison between research team and healthcare system</td>
</tr>
</tbody>
</table>

“Becoming integrated into the NIH Collaboratory scientific community was an exceptional experience for all 3 of the PROVEN PIs. Learning from the other investigators and Collaboratory leaders was the definitive highlight. We learned so much, and the experience of PROVEN will lead the way for future pragmatic trials in the nursing home setting.” — Susan Mitchell
