

# Meta Lessons Learned from Pilot and Demonstration Projects Implementation

Jennifer L. Sullivan, PhD; Jeffrey Turner, MPH; Zachary Baker, PhD; Saylor Lewtschenko, BA; Alexandria Morgan, MPH; Miranda Olson, MSc; Vincent Mor, PhD; Jill Harrison, PhD

Associate Professor, Brown University School of Public Health Department of Health Service, Policy and Practice

Associate Director & Investigator THRIVE COIN VA Providence Healthcare System

### Housekeeping

- All participants will be muted
- Enter all questions in the Zoom Q&A/chat box and send to Everyone
- Moderator will review questions from chat box and ask them at the end
- Visit impactcollaboratory.org
- Follow us on LinkedIN

# **Learning Objectives**

Upon completion of this presentation, you should be able to:

- Describe factors enabling and/or hindering pilot and demonstration project implementation
- Understand which implementation strategies were being used by pilot and demonstration grants
- Gain knowledge about how implementation progress was made by programs over the funding timelines

- To synthesize information about pilot and demonstration project implementation that are shared and generalizable
  - -To provide a guide for future research and implementation
  - To develop tools and resources for programs serving persons living with dementia

# Background

- An implementation science lens provides us with a way to understand what works for whom and why
- Frameworks and methods guide us
- What lessons can we learn across all awardees leveraging the rich qualitative evaluation data available to us?

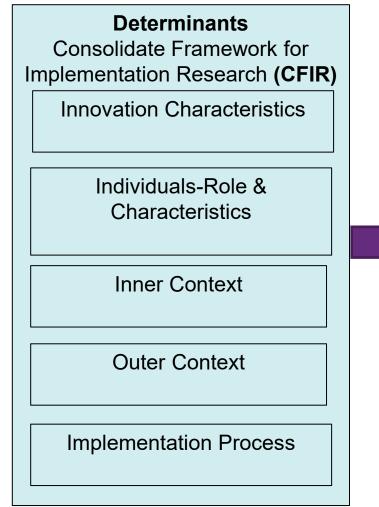

# Non-scientific language to define Implementation Science

- The intervention/practice/innovation = **THE THING**
- Effectiveness research looks at whether THE THING works
- Implementation research looks at how best to help people/places **DO THE THING**
- Implementation strategies = the stuff we do to try to help people/places DO THE THING
- Main implementation outcomes = HOW MUCH and HOW
  WELL they do the thing

Curran, G.M. Implementation science made too simple: a teaching tool. Implement Sci Commun 1, 27 (2020). https://doi.org/10.1186/s43058-020-00001-z

### Implementation Research Logic Model

#### **Implementation Outcomes**

#### **Implementation Progress**

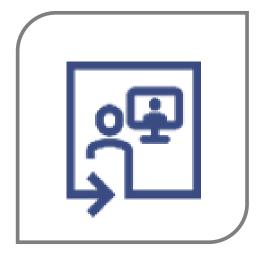

- Did project meet its defined goals?
- Reach: How close to enrollment benchmarks?
- Was the project feasible/acceptable to staff?
- Did the project assess secondary implementation outcomes?

Damschroder, Reardon, Widerquist, Lowery PMID: 36309746 ERIC= Expert Recommendations for Implementing Change; Powell et al PMID: 25889199 Waltz TJ, Powell BJ, Matthieu MM, Damschroder LJ, Chinman MJ, Smith JL, Proctor EK, Kirchner JE. PMID: 26249843 Smith JD, Li DH, Rafferty MR. PMID: 32988389

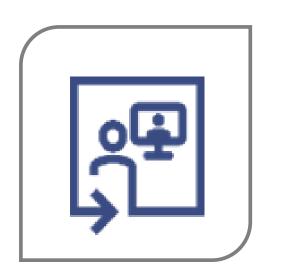

#### **Data Collection: Participant Selection**

- Interviews were conducted with pilot and demonstration project awardees to understand their experiences
- Participants included individuals involved in implementation efforts

#### **Data Collection**

- 52 interviews were conducted 6-months and 12-months from date of the first patient being recruited
  - 6-month interviews conducted: 26
  - 12-month interviews conducted: 22
  - Hybrid (6-month and 12-month combined): 2
  - 18-month (1 Pilot) & 24 month (1 Demo): 2
- Average Interview Length: Approximately 45 minutes
- For today's presentation, we assess 24 programs—24 at 6-months and 19 at 12-months.

#### **Data Collection**

Setting Type	Total
Primary Care	10
Geriatric Clinic	3
Long Term Care	3
All Other*	8
Total	24

\* All Other = Emergency Room, Insurance Plan, Memory Clinic, Accountable Care Organization, PACE/Community Health, Inpatient hospital

# **Data Analysis-Coding**

- Analyzed 44 interview transcripts from pilots and demonstration projects
  - -24 6-month;19 12-month
  - -A priori determinants constructs from the Consolidated Framework for Implementation Research 2.0 (CFIR)
  - -ERIC implementation strategy use (Waltz's concept mapping)
  - -Information about implementation progress

# **Data Analysis-Within Program**

- Primary coder/analyst with in-depth implementation science knowledge and experience was the primary coder and brought relevant passages to a matrix
- Secondary analysts wrote summary for each domain in the matrix
- Primary coder assessed for consensus

<u>Determinants:</u> Rated summary evidence as a facilitator, barrier, or mixed (acting as both facilitator/barrier)

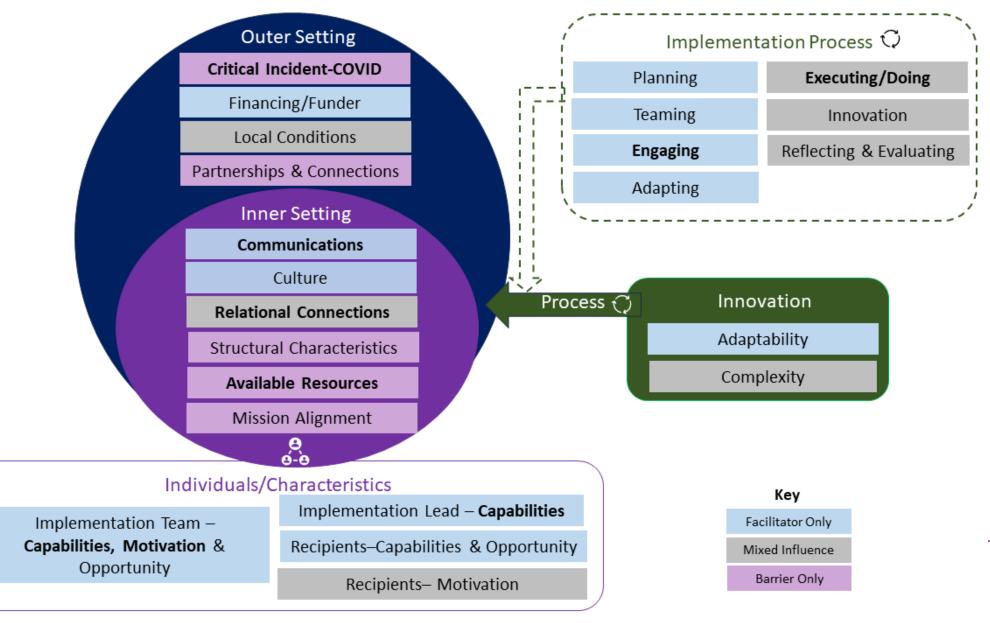

### **Data Analysis-Cross Program**

- Primary analyst compared determinants, use of implementation strategies, and implementation progress across programs for metalessons
- Comparisons between 6-month and 12-month time period made primarily for implementation progress

#### **Results – Overall Determinants**

#### **Results – Overall: Individual Characteristics**

Lead – Capabilities

**Team – Capabilities** 

Strong foundational expertise

Leveraged relationships and system knowledge

Ongoing growth and mentorship

Diverse, skilled teams

Transferable experience and strong communication

Collaborative relationships strengthen execution Team – Motivation

Engagement driven by intrinsic motivation and professional identity

Personal connections and ability to respond to challenges

Trust-building and recognition

### **Results – Overall: Inner Setting**

#### Communications

Consistent high quality communication

Communication was inclusive

Open communication & pre-existing relationships Relational Connections

Strong connection facilitate collaboration

Strategic relationship building

Weaker relationships hinder progress Available Resources

Staffing shortages and time constraints

Infrastructure and funding limitations

**Resource** gaps

### **Results – Overall: Outer Setting**

#### **Critical Incidents**

COVID-19 disrupted core intervention components and workflows

COVID-19 delayed start-up and delivery processes

External crises strained staffing and engagement

Administrative and regulatory burden

### **Results – Overall: Implementation Process**

#### Engaging

Early & inclusive engagement

Ongoing and bidirectional communication

Champions with pre-existing relationship

Sustained engagement requires effort

#### **Executing/Doing**

Structured planning

Embedded staff

Logistical & administrative barriers

Infrastructure gaps & intervention capacity

### Number of Programs Using Implementation Strategies (n=24)

Train and educate key partners **Develop key partner interrelationships** Adapt and tailor to context **Provide iterative assistance** Use of evaluative and iterative strategies **Engaging consumers** Utilize financial strategies **Change infrastructure Support clinicians** 10 12 16 18 20 0 2 8 14 6 4

### **Implementation Strategy Use Meta Lessons**

Engage key partners early, meaningfully and repeatedly

Identify and empower local champions Provide iterative, relational support

Align intervention with local context and workflows early

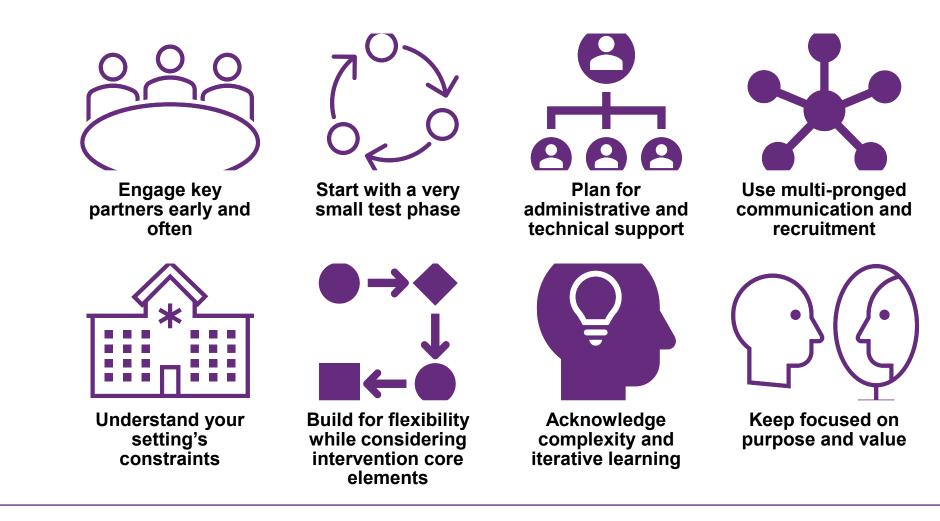

Design trainings to be role-specific, timely, and accessible

Communicate clearly, consistently, and strategically Use multimodal strategies for engagement and recruitment

Maintaining pragmatic focus

### **Implementation Progress Meta Lessons**

### Discussion

- Many positive findings suggesting that pilots and demonstration projects are well situated within their organizational context for success
- Meta lessons provide roadmap to consider how to implement programs generally and things to consider→ start early

### Limitations

- Data collection and analyses are still in progress
- More work needed to describe findings by program type, setting, and intervention
- More project specific examples need to be incorporated into the findings

### **Next Steps**

- Finalize analysis with remaining interviews and add in exemplars and examples
- Consider site-level patterns to assess for "difference makers"
- Create tools to assist new programs
- Explore ways to make this evidence available more broadly to the field

#### Implementation Success Meta Lessons

#### 1. Engage Key Partners Early and Broadly

**Takeaway:** Involve clinical staff-operational leades, ministrators, and IT from the beginning, not just at launch. Early key partner input inceases buy-in, improves alignment with local workflows, and prevents later resistance.

#### 2. Start with a Pilot Phase

**Takeaway:** Plan for a small-scale pilot bere full roliout. Us to test recruitment, data collection, workflows, and staff training. Pilots reduce risk, surface unforeseen barriers, and allow smoother full implementation.

#### 4. Use Multi-Pronged Communication and Recruitment

**Takeaway:** Recruitment and outreach require flexibility, Phone calls alone may be insufficient-conbine methods (texts, in-person, clinician referral) and plan for follow-up. Tailor to the population and setting.

#### 5. Understand Your Setting's Constraints

**Takeaway:** Every site is different. Assess credentialing timelinewre-Ines, IRB processes, population needs, and internal routines early. Nursing homes, EDs, and rural settings each require specific planing and adaptation.

#### 6. Build for Adaptation, While Preserving Core Elements

**Takeaway:** Balance flexibility and fidelity.Allow local teams to adapt components to their setting, but clarify the core parts of the program that must stay consistent to retame effectiveness.

#### 7. Prepare for Complexity and Iterative Learning

**Takeaway:** Expect a learning curve-espe-cially in pragmatic trials or first-time implementation. Bulio in reflection checkpoints, and treat problems as learning opportunities, not fallures.

NIA IMPACT COLLABORATORY TRANSFORMING DEMENTIA CARE

#### Supplemental Materials

## **Results – Determinants by Program Type**

- Pilots and demonstration project experienced many of the same determinants (13 determinants w/ similar influences)
- Additional results:
- BOTH Same Direction: Individuals Partner Opportunity (Mixed) & Motivation (Facilitator)
- BOTH Opposite Direction: Inner Setting Structural (Pilot Facilitator) (Demo Barrier)

# **Results–Determinants by Setting**

Similarities across 4 settings:

Facilitator: Individual Lead: Capabilities

Mixed: Process: Innovation

**Barrier:** Outer Setting: Critical Incidents

# **Results–Determinant by Setting**

#### Distinctions across 4 settings:

<u>Primary Care:</u> **Facilitator:** Individuals: Lead Motivation, Recipient: Capabilities and Opportunity; Process: Planning

LTC: Facilitator: Outer Setting: Financer/Funder

<u>All Other: Facilitator: Inner Setting: Mission Alignment, Team:</u> Opportunity, Process: Innovation Adapting

Mixed: Innovation: Complexity

#### **Implementation Progress at 6-months**
